GENERAL

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of this publication date. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions, which are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts : components, kits, and chassis. If the part number is not known, include the chassis or kit number of which it is a part and a sufficient description of the required component for proper identification.

PERSONNEL SAFETY

The following precautions are recommended for personnel safety :

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are secure and any open connectors are properly terminated.
- SHUT OFF this equipment when near electrical blasting caps or while in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by only qualified technicians.

PRE-INSTALLATION CONSIDERATIONS

1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The licensee is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

3. PRE-INSTALLATION CHECKOUT

3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. Signalling equipment operation should be verified.

4. PLANNING THE INSTALLATION

4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

4-2. Antenna

The favored location for an antenna is in the center of a large, flat conductive area, usually at the roof center. The trunk lid is preferred, bond the trunk lid and vehicle chassis using ground straps to ensure the lid is at chassis ground.

4-3. Radio

The universal mount bracket allows the radio to be mounted in a variety of ways. Be sure the mounting surface is adequate to support the radio's weight. Allow sufficient space around the radio for air cooling. Position the radio close enough to the vehicle operator to permit easy access to the controls when driving.

4-4. DC Power and wiring

1. This radio may be installed in negative ground electrical systems only. Reverse polarity will cause the cable fuse to blow. Check the vehicle ground polarity before installation to prevent wasted time and effort.
2. Connect the positive power lead directly to the vehicle battery positive terminal. Connecting the Positive lead to any other positive voltage source in the vehicle is not recommended.
3. Connect the ground lead directly to the battery negative terminal.
4. The cable provided with the radio is sufficient to handle the maximum radio current demand. If the cable must be extended, be sure the additional wire is sufficient for the current to be carried and length of the added lead.

GENERAL / SYSTEM SET-UP

5. INSTALLATION PLANNING – CONTROL STATIONS

5-1. Antenna system

Control station. The antenna system selection depends on many factors and is beyond the scope of this manual. Your KENWOOD dealer can help you select an antenna system that will best serve your particular needs.

5-2. Radio location

Select a convenient location for your control station radio which is as close as practical to the antenna cable entry point. Secondly, use your system's power supply (which supplies the voltage and current required for your system). Make sure sufficient air can flow around the radio and power supply to allow adequate cooling.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

NOTE

If you do not intend to use the 3.5-mm jack for the external speaker, fit the supplied speaker-jack cap to stop dust and sand from getting in.

SYSTEM SET-UP

OPERATING FEATURES

1. Controls and Functions

1-1. Front Panel

1-2. Microphone

- ① **⏻ (Power) switch**
Press to switch the transceiver ON. Press and hold for approximately 1 second to switch the transceiver OFF.
- ② **VOL ▲ / ▼ keys (left side)**
Press to increase or decrease the volume level.
- ③ **Display**
Refer to right.
- ④ **CH ▲ / ▼ keys (right side)**
Press to increase or decrease the channel number.
- ⑤ **MON / SCN / ● / ○ keys**
PF (Programmable Function) keys. Press each key to activate its programmable function.
- ⑥ **Microphone jack**
Insert the microphone plug into this jack.
- ⑦ **Speaker**
Internal speaker.
- ⑧ **PTT switch**
Press this switch, then speak into the microphone to call a station.

1-3. Display

Indicator	Description
TX	Appears while transmitting.
	Appears when trunking is activated.
	Appears while monitoring the selected channel (squelch is off).
CALL	Appears when making a call using Code Squelch or Selective Call. Appears and blinks when receiving a Code Squelch call.
SCN	Appears while scanning.
AUX	Appears when the AUX port has been activated or when the Scrambler function has been selected.
TA	Appears while using the Talk Around function.
P	The selected channel is set as a Priority channel.
A	The selected channel is added to the scanning sequence.
BUSY	Appears when a signal is detected on the currently selected channel.
	Appears when the transceiver keys have been locked, using the Key Lock function.
	Displays the currently selected group and channel number, or the channel name.

1-4. Rear Panel

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
PC mode	Used for communication between the radio and PC (IBM compatible).
PC programming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU.
PC tuning mode	Used to tune the radio using the PC.
Clone mode	Used to transfer programming data from one radio to another.
Self programming mode	You can program the frequency, signalling and other functions using only the radio.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
PC mode	Received commands from PC
Clone mode	[CH DOWN]+Power ON (Two seconds)
Self programming mode	[MON]+Powr ON (Two seconds)

3. PC Mode

3-1. Preface

The TK-7100H transceiver is programmed using a personal computer, a programming interface (KPG-46) and programming software (KPG-80D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

Fig. 1

3-2. Connection Procedure

1. Connect the TK-7100H to the personal computer with the interface cable.
2. When the Power is switched on, user mode can be entered immediately. When the PC sends a command, the radio enters PC mode. When data is transmitted from transceiver, the TX indicator blink. When data is received by the transceiver, the BUSY indicator blink. In the PC mode, " PC " is displayed on the LCD.

3-3. KPG-46 Description

(PC programming interface cable : Option)

The KPG-46 is required to interface the TK-7100H to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-46 connects the modular microphone jack of the TK-7100H to the computers RS-232C serial port.

3-4. Programming Software Description

KPG-80D is the programming software for TK-7100H supplied on three 3.5" floppy diskettes. This software runs under Windows 98, ME, Windows 2000 or XP on an IBM-PC or compatible machine.

The data can be input to or read from TK-7100H and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

4. Clone Mode

Programming data can be transferred from one radio to another by connecting them via their modular microphone jacks. The operation is as follows (the transmit radio is the master and the receive radio is the slave).

Note :

Clone mode should be enabled.

1. Turn the master TK-7100H power ON with the [CH DOWN] key held down (2 seconds), " CLONE " is displayed on the LCD.
2. Power on the slave TK-7100H.
3. Connect the cloning cable (No. E30-3382-05) to the modular microphone jacks on the master and slave.
4. Press the [MON] key on the master TK-7100H transceiver. The data of the master is sent to the slave. While the master is sending data, [TX] icon blinked. While the slave is receiving the data, " PC " is displayed and [BUSY] icon blinked. When cloning of data is completed, the master displays "END", and the master [TX] icon turned off, and the slave automatically operates in the User mode. The slave can then be operated by the same program as the master.
5. The other slave can be continuously cloned. Carry out the operation in step 2 to 4.

REALIGNMENT

4-1. Adding the data password.

If the data password is set in the optional feature menu, you must enter the password (Master transceiver) to activate a clone mode.

You can use 1, 2, 3, and 4 to configure the password. The maximum length of the password is 6 digits.

1. [CH DOWN]+Power ON.
2. "CLN LOCK" is displayed on the LCD.
3. Enter the password using 1 : [MON] key, 2 : [SCN] key, 3 : [●] key and 4 : [○] key.
4. Press [CH DOWN] key.
5. If the password matches, the transceiver enters a clone mode and "CLONE" is displayed. Otherwise, transceiver beeps and returns to the password input mode.

Fig. 2

■ Flow Chart (Master radio)

5. Self Programming Mode

Write mode for frequency data and signalling, etc. To be used ONLY by the authorized service person maintaining the user's equipment. After programming, reset the FPU to the "Self- Programming" disabled mode. Radios CANNOT be delivered to the end-user in the self-programming mode.

5-1. Enter to the Self Programming Mode

Hold down the [MON] key and turn the power switch on. When enter the self programming mode, "SELF" is displayed.

5-2. Adding the Data Password

If the data password is set in the optional feature menu, you must enter the password to activate a self programming mode.

You can use 1, 2, 3 and 4 to configure the password. The maximum length of the password is 6 digits.

1. [MON]+Power ON.
2. "SELFLOCK" is displayed on the LCD.
3. Enter the password using 1 : [MON] key, 2 : [SCN] key, 3 : [●] key and 4 : [○] key.
4. Press [CH DOWN] key.
5. If the password matches, the transceiver enters a self programming mode and "SELF" is displayed. Otherwise, transceiver beeps and returns to the password input mode.

Note :

This mode (self programming mode) cannot be set when it has been disabled with the FPU.

5-3. Channel Setting Mode

Each channel can be setup in its action mode by using the panel keys.

- Pressing [MON] when "SELF" is displayed, sets channel setting mode.
- Select an item set using [●] then change the selection with the [CH UP] or [CH DOWN].
- The data displayed using [SCN] is stored in the memory and then proceeds to the next item.
- Pressing [●] proceeds to the next item without storing it in the memory.
- Press [MON] to set the display to "SELF" and return to reset (default) status.

The setup items for channel setting mode are listed below.

No.	Function	Choices	Display	Remarks
	Select channel	1~64	1- 1. 1- 64.	● key : Group/Channel selection
	Select group	1~8	1.- 1 8.- 1	● key : Group/Channel selection
1	RX frequency	Step 2.5kHz~ 1MHz	STP 250 STP 1M	Display when an item is selected or a step is changed (about 0.5 seconds). ○ key : Select the frequency step
		Blank 100.0000~ 550.0000MHz	R.----- R.150.0000	○ key : Hold 1 second to frequency on/blank switching. The right most dot indicates 50Hz digit. (On=5, Off=0)

REALIGNMENT

		Low power	PWR L	
10	Wide/Narrow	Wide	WIDE	Default
		Narrow	NARROW	
11	Scan Del/Add	Delete	SCAN DEL	
		Add	SCAN ADD	Default
12	Priority channel	No	P.CH NO	Default
		Yes	P.CH YES	Not used when scan priority is not fixed.
13	PTT ID	Off	P.ID OFF	Default
		Begin of TX	P.ID BOT	
		End of TX	P.ID EOT	
		Both	P.ID BOTH	
14	Scrambler	Off	SCR OFF	Default
		No	SCR ON	
15	Scrambler code	1~16	SCR 1 SCR 16	Default

- Finish beep will sound when displayed data is stored.
- The settings for scrambler and scrambler code can only be selected when voice scrambler board is installed.

REALIGNMENT

Flow Chart

5-4. DTMF Setting Mode

Each radio can be setup in its action mode by using the panel keys.

- Pressing [SCN] when " SELF " is displayed, sets the DTMF setting mode.
- The data displayed using [SCN] is stored in the memory.
- Pressing [●] to without storing it in the memory.
- Press [O] to default status.

Flow Chart

The setup items for DTMF setting mode are listed below.

No.	Function	Choices	Display	Remarks
1	ID code	000~9999999999 (Code squelch)	ID	Display when an item is selected (about 0.5 seconds).
			1 2 3 4 5 6 7 8	Display of the current setting (If it is 8 or more digits, scroll it).
			-----9 8 7	Display when a code is input (Input it with DTMF key only).
			-----0 0 0	[O] key : Set to default data
		0000~9999 (Selective call) (*1)	ID	Display when an item is selected (about 0.5 seconds).
			---- 1 2 3 4 (*1)	Display of the current setting (Input the code with DTMF key only).
		-----0 0 0 (*1)	[O] key : Set to default data	

- Finish beep will sound when displayed data is stored.
- (*1) : ID code range is from 3 to 4 digits when selective call is selected.

REALIGNMENT

6. Accessory Connection Cable (KCT-39)

The KCT-39 is an accessory connection cable for connecting external equipment. The connector has 15 pins and the necessary signal lines are selected for use.

6-1. Installing the KCT-39 in the Transceiver

1. Lift the DC cord bushing (1) from the chassis. Peel the pad as shown in Figure 3 (2).

Fig. 3

2. Stick the pad to the DC cord (3) and chassis (4), both of which are supplied with the KCT-39.

Fig. 4

3. Insert the KCT-39 cable (5) into the chassis (6). The wire harness band (7) must be inside the chassis and face down.
4. Connect the KCT-39 to the TX-RX unit as shown in Figure 5 (8).

Avoid forming the wiring towards the shielding cover closure area.

Fig. 5

5. Connect the KCT-39 to the external accessory by inserting the crimp terminal (9) into the square plug (10), both of which are supplied with the KCT-39.

Fig. 6

■ Accessory Port Function

No.	Color	Internal connector	Name	No.	Color	Internal connector	Name
1	Red	CN2-1	SB	9	Purple	CN2-12	FNC8
2	Pink	CN3-1	IGN	10	Gray	CN2-10	FNC6
3	Black	CN2-3	GND	11	White	CN2-11	FNC7

REALIGNMENT / INSTALLATION

7. Ignition Sense Cable (KCT-18)

The KCT-18 is an optional cable for enabling the ignition function. The ignition function lets you turn the power to the transceiver on and off with the car ignition key.

7-2. Connecting the KCT-18 to the Transceiver

1. Install the KCT-39 in the transceiver. (See the KCT-39 section)
2. Insert the KCT-18 lead terminal (❶) into pin 2 of the KCT-39 (❷).

Fig. 7

7-3. Modifying the Transceiver

Modify the transceiver as follows to turn the power on and off with the ignition key.

1. Remove the jumper resistor (0Ω) R71 of the TX-RX unit.

■ Setting With the KPG-80D

Select "External Devices" from the "Edit" menu and enable the "Ignition Sense".

Fig. 8

1. Optional Board

1-1. Voice Scrambler Board Connection

■ Modification

1. Remove the cabinet and shielding cover from the transceiver.
2. Delete R202 and R267 on the TX-RX unit.

Fig. 1

■ Connection

The functions of pins of CN2 and CN3 on the TX-RX unit are shown in the TERMINAL FUNCTION section (page 34).

Fig. 2

INSTALLATION

■ Pins Connection

■ Picture (Trunking Board)

Fig. 4

■ Setting With the KPG-80D

Select "External Devices" from the "Edit" menu and set the "SmarTrunk".

DISASSEMBLY FOR REPAIR

1. When you remove the panel, turn the transceiver up side down. Detach the panel by lifting the tabs as shown below.

Fig. 1

3. When mounting the front panel, match the 4 tabs of the chassis with the panel, being sure they attach securely.

Fig. 3

2. To remove the cabinet, first turn the transceiver up side down. Detach the cabinet by prying the tabs as shown below.

Fig. 2

- 4-1. Remove the display unit
To remove the display unit from the panel, follow the correct procedures shown (A regular screw driver is needed as illustrated).

①

Open the bottom of display unit at No. 1 as indicated.

DISASSEMBLY FOR REPAIR

4-2. Mount the display unit
To mount the display unit on the panel, follow the correct procedures shown to ensure easy display unit assembly and good fitting onto the panel.

DISASSEMBLY FOR REPAIR

③

Snap in top of display unit (No. 4).

⑥

Snap in bottom of display unit (No. 3).

④

Snap in bottom of display unit (No. 1).

⑦

Ensure that display unit holes locator is properly located on the illumination guide locators as shown.

⑤

Snap in bottom of display unit (No. 2).

CIRCUIT DESCRIPTION

Frequency Configuration

The receiver utilizes double conversion. The first IF is 49.95MHz and the second IF is 450kHz. The first local oscillator signal is supplied from the PLL circuit.

The PLL circuit in the transmitter generates the necessary frequencies. Figure 1 shows the frequencies.

Fig. 1 Frequency configuration

Receiver System

The receiver is double conversion superheterodyne. The frequency configuration is shown in Figure 1.

Front-end RF Amplifier

An incoming signal from the antenna is applied to an RF amplifier (Q353) after passing through a transmit/receive switch circuit (D603, D605 are off) and a band pass filter (L357, L356 and varactor diodes : D353, D354). After the signal is amplified (Q353), the signal is filtered through a band pass filter (L354, L355 and varactor diodes: D351, D352) to eliminate unwanted signals before it is passed to the first mixer.

The voltage of these diodes are controlled by tracking the CPU (IC101) center frequency of the band pass filter. (See Fig. 2)

First Mixer

The signal from the RF amplifier is heterodyned with the first local oscillator signal from the PLL frequency synthesizer circuit at the first mixer (Q352) to create a 49.95MHz first intermediate frequency (1st IF) signal. The first IF signal is then fed through one pair of monolithic crystal filter (MCF : XF351) to further remove spurious signals.

IF Amplifier

The first IF signal is amplified by Q351, and the enters IC301 (FM processing IC). The signal is heterodyned again with a second local oscillator signal within IC301 to create a 450kHz second IF signal. The second IF signal is then fed through a 450kHz ceramic filter (Wide : CF301, Narrow : CF302) to further eliminate unwanted signals before it is amplified and FM detected in IC301.

Item	Rating
Nominal center frequency	49.95MHz
Pass bandwidth	±5.0kHz or more at 3dB
35dB stop bandwidth	±20.0kHz or less
Ripple	1.0dB or less
Insertion loss	5.0dB or less
Guaranteed attenuation	80dB or more at fo±1MHz Spurious : 40dB or more within fo±1MHz
Terminal impedance	350Ω / 5.5pF

Table 1 Crystal filter (L71-0591-05) : XF351

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±6.0kHz or more
50dB bandwidth	±12.5kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	35.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 2 Ceramic filter (L72-0993-05) : CF301

Item	Rating
Nominal center frequency	450kHz
6dB bandwidth	±4.5kHz or more
50dB bandwidth	±10.0kHz or less
Ripple	2.0dB or less
Insertion loss	6.0dB or less
Guaranteed attenuation	60.0dB or more within fo±100kHz
Terminal impedance	2.0kΩ

Table 3 Ceramic filter (L72-0999-05) : CF302

Fig. 2 Receiver system

CIRCUIT DESCRIPTION

Wide/Narrow Changeover Circuit

The Wide port (pin 65) and Narrow port (pin 64) of the CPU is used to switch between ceramic filters. When the Wide port is high, the ceramic filter SW diodes (D303, D302) cause CF301 to turn on to receive a Wide signal.

When the Narrow port is high, the ceramic filter SW diodes (D303, D302) cause CF302 to turn on to receive a Narrow signal.

Fig. 3 Wide/Narrow changeover circuit

AF Signal System

The detection signal from IF IC (IC301) goes to D/A converter (IC161) to adjust the gain and is output to AF filter (IC251) for characterizing the signal. The AF signal output from IC251 and the DTMF signal, BEEP signal are summed and the resulting signal goes to the D/A converter (IC161). The AFO output level is adjusted by the D/A converter. The signal output from the D/A converter is input to the audio power amplifier (IC252). The AF signal from IC252 switches between the internal speaker and speaker jack (J1) output.

Fig. 4 AF signal system

Squelch Circuit

The detection output from the FM IF IC (IC301) passes through a noise amplifier (Q301) to detect noise. A voltage is applied to the CPU (IC101). The CPU controls squelch according to the voltage (SQIN) level. The signal from the RSSI pin of IC301 is monitored. The electric field strength of the receive signal can be known before the SQIN voltage is input to the CPU, and the scan stop speed is improved.

Fig. 5 Squelch circuit

PLL Frequency Synthesizer

The PLL circuit generates the first local oscillator signal for reception and the RF signal for transmission.

PLL

The frequency step of the PLL circuit is 5 or 6.25kHz. A 16.8MHz reference oscillator signal is divided at IC401 by a fixed counter to produce the 5 or 6.25kHz reference frequency. The voltage controlled oscillator (VCO) output signal is buffer amplified by Q410, then divided in IC401 by a dual-module programmable counter. The divided signal is compared in phase with the 5 or 6.25kHz reference signal in the phase comparator in IC401. The output signal from the phase comparator is filtered through a low-pass filter and passed to the VCO to control the oscillator frequency. (See Fig. 6)

VCO

The operating frequency is generated by Q406 in transmit mode and Q405 in receive mode. The oscillator frequency is controlled by applying the VCO control voltage, obtained from the phase comparator, to the varactor diodes (D405 and D406 in transmit mode and D403 and D404 in receive mode). The TX/RX pin is set low in receive mode causing Q408 and Q407 to turn Q406 off, and turn Q405 on. The TX/RX pin is set high in transmit mode. The outputs from Q405 and Q406 are amplified by Q410 and sent to the RF amplifiers.

Fig. 6 PLL circuit

CIRCUIT DESCRIPTION

■ Unlock Circuit

During reception, the 8RC signal goes high, the 8TC signal goes low, and Q34 turns on. Q33 turns on and a voltage is applied to the collector (8R). During transmission, the 8RC signal goes low, the 8TC signal goes high and Q36 turns on. Q35 turns on and a voltage is applied to 8T.

The CPU in the control unit monitors the PLL (IC401) LD signal directly. When the PLL is unlocked during transmission, the PLL LD signal goes low. The CPU detects this signal and makes the 8TC signal low. When the 8TC signal goes low, no voltage is applied to 8T, and no signal is transmitted.

Fig. 7 Unlock circuit

Transmitter System

■ Outline

The transmitter circuit produces and amplifies the desired frequency directly. It FM-modulates the carrier signal by means of a varicap diode.

■ Power Amplifier Circuit

The transmit output signal from the VCO passes through the transmission/reception selection diode (D409) and amplified by Q501, Q502 and Q503. The amplified signal goes to the final amplifier (Q504) through a low-pass filter. The low-pass filter removes unwanted high-frequency harmonic components, and the resulting signal is goes the antenna terminal.

■ APC Circuit

The automatic transmission power control (APC) circuit detects part of a final amplifier output with a diode (D606, D607) and applies a voltage to IC501. IC501 compares the APC control voltage (PC) generated by the D/A converter (IC161) and DC amplifier (IC203) with the detection output voltage. IC501 generates the voltage to control Q503 and Q504 and stabilizes transmission output.

The APC circuit is configured to protect over current of Q503 and Q504 due to fluctuations of the load at the antenna end and to stabilize transmission output at voltage and temperature variations.

Fig. 8 Transmitter system

Fig. 9 APC circuit

CIRCUIT DESCRIPTION

Control Circuit

The CPU carries out the following tasks:

- 1) Controls the WIDE, NARROW, TX/RX outputs.
- 2) Adjusts the AF signal level of the AF filter (IC251) and turns the filter select compounder on or off.
- 3) Controls the display unit.
- 4) Controls the PLL (IC401).
- 5) Controls the D/A converter (IC161) and adjusts the volume, modulation and transmission power.

Fig. 10 Control circuit

Memory Circuit

The transceiver has an 64k-bit EEPROM (IC66). The EEPROM contains adjustment data. The CPU (IC101) controls the EEPROM through three serial data lines.

Fig. 11 Memory circuit

Display Circuit

The CPU (IC101) controls the display LCD and LEDs. When power is on, the CPU will use the MBL line to control the LCD illumination and key backlight LEDs.

The dimmer function is controlled by the switch Q11. The LCD controller (IC2) controls the functions of the LCD through the CE, CK, DI lines from the CPU.

Fig. 12 Display circuit

Key Matrix Circuit

The TK-7100H front panel has function keys. Each of them is connected to a cross point of a matrix of the KMI1 to KMO2 ports of the microprocessor. The KMO1 to KMO2 ports are always high, while the KMI1 to KMI4 ports are always low.

The microprocessor monitors the status of the KMI1 to KMO2 ports. If the state of one of the ports changes, the microprocessor assumes that the key at the matrix point corresponding to that port has been pressed.

Fig. 13 Key matrix circuit

Encode

The QT and DQT signals are output from QT/DQT of the CPU (IC101) and summed with the external pin DI line by the summing amplifier (IC203) and the resulting signal goes to the D/A converter (IC161). The DTMF signal is output from DTMF of the CPU and goes to the D/A converter (IC161). The signal is summed with a MIC signal by the summing amplifier (IC203), and the resulting signal goes to the D/A converter (IC161).

The D/A converter (IC161) adjusts the MO level and the balance between the MO and QT/DQT levels. Part of a QT/DQT signal is summed with MO and the resulting signal goes to the VCOMOD pin of the VCO. This signal is applied to a varicap diode in the VCO for direct FM modulation.

Fig. 14 Encodet

CIRCUIT DESCRIPTION / SEMICONDUCTOR DATA

Decode

• QT/DQT/DTMF

The signal (W/NO (EVOL2)) goes to SIGNAL (pin 88) of CPU (IC101). The QT/DQT signal will pass through the low-pass filters in the CPU (IC101) and be decoded within the CPU (IC101). The DTMF signal will be decoded within the CPU (IC101).

Fig. 15 Decode

D/A Converter

The D/A converter (IC161) is used to adjust MO modulation, AF volume, TV voltage, FC reference voltage, and PC POWER CONTROL voltage level.

Adjustment values are sent from the CPU as serial data. The D/A converter has a resolution of 256 and the following relationship is valid:

$$D/A \text{ output} = (V_{in} - V_{DRef}) / 256 \times n + V_{DRef}$$

V_{in} : Analog input

V_{DRef} : D/A reference voltage

n : Serial data value from the microprocessor (CPU)

Power Supply Circuit

When the power switch on the display unit is pressed, the power port on the display unit which is connected port 17 (POWER), goes low, then port 82 (SBC) goes high, Q32 turns on, SB SW (Q31) turns on and power (SB) is supplied to the radio.

When the DC power supplied to the radio, the voltage regulator IC (IC33) supply into the CPU VDD and reset voltage detect IC (IC34). IC34 will generate signal (RESET) in to the reset terminal on the CPU (IC101) to carry out a power ON reset. Also, CPU (IC101) is checking on port 91 (Battery Voltage). If DC power is less than about 9.5V, the radio is unable to power on.

When the DC power voltage decreases from normal voltage, the INT voltage detector IC (IC35) will set to high on CPU port 18 (INT) if B line will became less than about 9.5V. Then CPU send to EEPROM (IC66) the backup data and go into STOP mode.

This circuit has an overvoltage protection circuit. If a DC voltage of 18V or higher is applied to the base of Q61, this voltage turns Q61 on and turns Q32 and SB off.

100	KMO2	O	Key matrix output 2.

COMPONENTS DESCRIPTION

Display Unit (X54-3430-20)

Ref. No.	Parts name	Description
IC2	IC	LCD controller
Q6	Transistor	DC switch
Q9	Transistor	LCD backlit switch
Q10	Transistor	Key backlit switch
Q11	Transistor	Dimmer function switch
D2~5	LED	Key & LCD backlit
D17	Diode	DC switch
D18	Diode	DC controller
D19~26	LED	Key & LCD backlit
D27	Diode	Surge absorption
D28~31	LED	Key & LCD backlit

TX-RX Unit (X57-6700-20)

Ref. No.	Parts name	Description
IC31	IC	Voltage regulator (8C)
IC32	IC	Voltage regulator (5C)
IC33	IC	Voltage regulator (5M)
IC34	IC	Voltage detector reset
IC35	IC	Voltage detector int
IC66	IC	EEPROM
IC101	IC	CPU
IC161	IC	Digital potentiometer
IC201	IC	MIC amplifier / IDC
IC202	IC	MIC amplifier / Splatter filter
IC203	IC	Buffer amplifier / SUM amplifier / DC amplifier / 1/2 Vcc
IC251	IC	Audio filter
IC252	IC	Audio amplifier
IC301	IC	FM demodulation
IC401	IC	PLL synthesizer
IC402	IC	Divider (Hetero)
IC501	IC	APC controller
Q1	FET	TX AF
Q31,32	Transistor	DC switch (SB) / Active when power is on
Q33,34	Transistor	DC switch (8R) / Active while RX
Q35,36	Transistor	DC switch (8T) / Active while TX
Q61	Transistor	Over voltage detection / Active when PS voltage is more than 18V
Q71	Transistor	Ignition / Ignition sens
Q86,87	Transistor	Beat shift / Active while beat shift is on
Q201	Transistor	AF amplifier / MIC mute / Emergency MIC mute
Q202	FET	Emergency MIC mute / Active when MICEM is H
Q251	Transistor	Buffer amplifier / RX audio
Q252,253	FET	AF mute / Active while AFM is H

Ref. No.	Parts name	Description
Q254	Digital transistor	AF mute / Active while SPM is H
Q255	Transistor	AF mute / Active while AMPSW is H
Q301	Transistor	Noise amplifier / SQL amplifier
Q302	Transistor	Buffer amplifier / 16.8MHz 3rd over tone
Q351	Transistor	IF amplifier
Q352	FET	Mixer
Q353	FET	RF amplifier / LNA
Q354	Transistor	RF BPF
Q402,403	Transistor	Charge pump
Q404	Transistor	RF amplifier / PLL F in
Q405	FET	RX VCO
Q406	FET	TX VCO
Q407	FET	T/R switch
Q408	Transistor	T/R switch
Q410	Transistor	Buffer amplifier / Output of VCO
Q411	Transistor	RF amplifier / Output of VCO
Q440	Transistor	Lipple filter
Q501,502	Transistor	RF amplifier / Drive stage
Q503	FET	RF amplifier / Drive amplifier
Q504	FET	RF amplifier / Final amplifier
D1	Diode	Surge absorption / CM
D2	Diode	Surge absorption / HOOK
D3	Diode	Surge absorption / PTT
D4~11	Diode	Surge absorption / FNC1~8
D31	Diode	Reverse connection protection
D32	Poly switch	Current protection
D61	Diode	Over voltage detection
D201	Diode	OR gate / MIC mute, AGC
D202	Diode	AGC
D251	Diode	Limiter
D301	Diode	Detection
D302,303	Diode	IF switch (Wide/Narrow)
D351~354	Varicap	RF BPF tuning
D401	Diode	Lipple filter
D402	Diode	Voltage dropped
D403,404	Varicap	RX VCO
D405,406	Varicap	TX VCO
D407	Varicap	Modulation
D408	Diode	Lipple filter
D409	Diode	RF switch (TX/RX)
D501,502	Diode	Temperature compensation
D503	Diode	Voltage protection
D602,603	Diode	ANT switch
D605	Diode	ANT switch
D606,607	Diode	APC voltage detect
D608	Diode	Temperature compensation

EXPLODED VIEW

PACKING

Parts with the exploded numbers larger than 700 are not supplied.

ADJUSTMENT

Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency Range Modulation Output	136 to 175MHz Frequency modulation and external modulation -127dBm/0.1μV to greater than -7dBm/100mV
2. Power Meter	Input Impedance Operation Frequency Measurement Capability	50Ω 136 to 175MHz or more Vicinity of 100W
3. Deviation Meter	Frequency Range	136 to 175MHz
4. Digital Volt Meter (DVM)	Measuring Range Accuracy	1 to 20V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High Sensitivity Frequency Counter	Frequency Range Frequency Stability	10Hz to 1000MHz 0.2ppm or less
7. Ammeter		20A
8. AF Volt Meter (AF VTVM)	Frequency Range Voltage Range	50Hz to 10kHz 1mV to 3V
9. Audio Generator (AG)	Frequency Range Output	20Hz to 20kHz or more 0 to 1V
10. Distortion Meter	Capability Input Level	3% or less at 1kHz 50mV to 10Vrms
11. 4Ω Dummy Load		Approx. 4Ω, 10W or more
12. Regulated Power Supply		13.6V, approx. 20A (adjustable from 9 to 17V) Useful if ammeter reequipped
13. Spectrum Analyzer	Center frequency	50KHz to 600MHz
14. Tracking Generator	Output Voltage	100mV or more

Test cable for microphone input (E30-3360-08)

Tuning cable (E30-3383-05)

Adapter cable (E30-3383-05) is required for injecting an audio if PC tuning is used. See "PC Mode" section for the connection.

MIC connector (Front view)

ADJUSTMENT

Adjustment Location

■ Switch

■ Adjustment Points

■ Notes

• EEPROM

The tuning data (Deviation, Squelch, etc.) for the EEPROM, is stored in memory. When parts are changed, re-adjust the transceiver.

• AF PA IC (IC252)

How to mounting the IC252.

• Speaker Cable

The speaker cable should be formed before mounting the shield cover as below.

• Fuse

To mount the fuse, the cable terminal direction must be as follow.

ADJUSTMENT

PCB Section

Item	Condition	Measurement		Adjustment		Specifications/ Remarks
		Test equipment	Terminal	Parts	Method	
1. Setting	1) Power supply voltage DC Power supply terminal : 13.6V					
2. VCO lock voltage*	1) CH : TX high	Digital voltmeter	CV	TC402	5.5V	±0.1V
	2) CH : RX high			TC401	5.5V	±0.1V
	3) CH : TX low				Check	0.7V or more
	4) CH : RX low					
3. IF coil	1) CH : RX center (Wide)	SSG Digital voltmeter	AFV	L301	3.25~3.35V (DC)	
	2) SSG output : -53dBm (501μV) Mod : 1kHz, Dev : 3kHz					
4. RF bandpass filter	1) CH : RX center (Wide) CH : RX low (Wide) CH : RX high (Wide)	Tra generator Spectrum analyzer	ANT BPF	TC351 TC352	Adjust the BPF waveform to Fig. 1	
	2) Tra generator output : -30dBm Connect the spectrum analyzer to BPF terminal					

* Adjustment of TX VCO lock voltage

1. Remove R516, F501, R518 and R524 (all on component side).
2. Remove PCB from chassis.
3. Transmit and check voltage at [CV] point.

Warning : Do not transmit if step "1." is not complete.

4. Adjust of voltage can be done by tuning TC402.

Fig. 1

4. Low power	1) CH : TX low CH : TX low' CH : TX center CH : TX high' CH : TX high 2) Transmit				25W	±1.0W
5. DQT balance	1) CH : TX low (Wide) CH : TC center (Wide/Narrow) CH : TX high (Wide) 2) Transmit	Modulation analyzer or Linear detector (LPF : 3kHz) Oscilloscope				Adjust the waveform as below 
6. MAX balance	1) CH : TX low (Wide) CH : TC center (Wide/Narrow) CH : TX high (Wide) 2) AG : 1kHz/50mV 3) Transmit	Modulation analyzer or Linear detector (LPF : 15kHz) Oscilloscope AG	ANT MIC		±4.0kHz (Wide) ±2.0kHz (Narrow) According to the large +, -	±50Hz
7. MIC sensitivity	1) CH : TX center (Wide/Narrow) 2) AG : 1kHz/5mV 3) Transmit	AF V.M			Check	±3kHz±0.2kHz (Wide) ±1.5kHz±0.1kHz (Narrow)
8. DQT deviation	1) CH : TX low (Wide) CH : TX center (Wide/Narrow) CH : TX high (Wide) 2) Transmit	Modulation analyzer or Linear detector (LPF : 3kHz) Oscilloscope			±0.75kHz (Wide) ±0.35kHz (Narrow)	±0.05kHz
9. QT deviation	1) CH : TX low (Wide) CH : TX center (Wide/Narrow) CH : TX high (Wide) 2) Transmit				±0.75kHz (Wide) ±0.35kHz (Narrow)	±0.05kHz
10. DTMF/MSK deviation	1) CH : TX center (Wide/Narrow) 2) Transmit				±3.0kHz (Wide) ±1.5kHz (Narrow)	±0.2kHz

If normal power is not obtained, please follow the step below

Open the shielding cover (upper), and screw 3 locations around ANT pin.

- Switch off the transceiver.
Impedance of Final FET (Q504) and Drive FET (Q503) can be measured easily using DVM Ω mode.
Normal condition – Gate : 20kΩ~50kΩ, Drain : 1MΩ~2MΩ
The above impedance values are rough estimations.
- Switch on the transceiver. Check the voltage at F501 output point.
The voltage is around 13.6V in receiving condition. The voltage will be 12.6V~ in transmitting condition. If found 0V at this point then F501 is broken.
- Remove R516.

- Connect 50Ω load at the ANT location.
Transmit and check current drain at High power mode.
If the current drain is less than 1A, then Final FET is broken.
If the current drain is less than 5.0A, short the Drive FET gate to ground, and check the current drain.
If the current drain is not 0.1A less than the original value, then the Drive FET is broken.
- Check input power level at Drive FET gate location.
Connect the wire to [RF] location.
Transmit and check for power to be within the range of 0.3W~0.6W.
If power found is less than 0.3W, check the circuit before the Drive FET.

LEVEL DIAGRAM

Receiver Section

To make measurements in the RF section, connect the RF level meter.
In the RF section, use a 0.01μF coupling capacitor.
(The display shows the SSG input value required to obtain 12dB SINAD.)

To make measurements in the AF section, connect the AC level meter.
(ANT input : -53dBm, 1kHz FM, 3kHz DEV (Wide)/1.5kHz DEV (Narrow))
The AF output level is adjusted for a 0.45V/4Ω by the front panel AF VOL control.

Transmitter Section

To make measurements in the AF section, connect the AC level meter.
AG is set so that MIC input becomes 3kHz/1.5kHz (Wide/Narrow) DEV at 1kHz MOD.

To make measurements in the RF section, connect the RF Wattmeter (50Ω).

SPECIFICATIONS

GENERAL

Frequency Range	146 to 174MHz
Channels / Groups	64CH / 8GRP
Channel Spacing	Wide : 25kHz Narrow : 12.5kHz
PLL Channel Stepping	2.5, 5, 6.25, 7.5kHz
Operating Voltage	13.6V DC \pm 15%
Current Drain	Less than 0.4A on standby Less than 1.0A on receive Less than 14.0A on transmit
Operating Temperature Range	-30°C to +60°C
Dimensions & Weight	6.30 (160) W x 1.70 (43) H x 5.40 (137) D inch (mm), 2.60 lbs (1.18kg)
Channel Frequency Spread	28MHz

RECEIVER (Measurements made per EIA standard EIA/TIA-603)

Sensitivity (12dB SINAD)	Wide : 0.28 μ V Narrow : 0.35 μ V
Selectivity	Wide : 75dB Narrow : 65dB
Intermodulation	Wide : 70dB Narrow : 60dB
Spurious Response	75dB
Audio Power Output	4.0W
Frequency Stability	\pm 2.5ppm

TRANSMITTER (Measurements made per EIA standard EIA/TIA-603)

RF Power Output	High : 50W Low : 25W
Spurious and Harmonics	70dB
Modulation	Wide : 16K0F3E Narrow : 11K0F3E
FM Noise	Wide : 45dB Narrow : 40dB
Audio Distortion	Less than 3%
Frequency Stability	\pm 2.5ppm
