## GENERAL

### INTRODUCTION

#### SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication date. Changes which may occur after publication are covered by either Service Bulletins of Manual Revisions. These are issued as required.

#### ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts: components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

### PERSONNEL SAFETY

The following precautions are recommended for personnel safety:

- DO NOT transmit if someone is within two feet (0.6 meter) of the antenna.
- DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.
- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- All equipment should be properly grounded before power-up for safe operation.
- This equipment should be serviced by a qualified technician only.
- Be careful against electric hazard, for the commercial power supply is being applied to the internal circuitry of the radio even when the Power switch is OFF.

### FCC COMPLIANCE AND TYPE NUMBERS

Type acceptance number	Frequency range	Compliance
ALH9TKTKR-820-1	450 to 470MHz	Part 22, 74, 90 and 95A
ALHTKR-820-2	470 to 490MHz	Part 22, 74 and 90
ALHTKR-820-3	490 to 512MHz	Part 22, 74 and 90
ALHTKR-820-4	406 to 430MHz	Part 90

#### 1. POWER-UP

To push on the radio. The POWER indicator will illuminate to indicate power is ON.

#### 2. TO RECEIVE

Operation	Procedure
1. Disable QT If so programmed.	Push on MONITOR switch.
2. Unsquench radio	Turn SQUELCH control counter-clockwise until noise is heard.
3. Set VOLUME control	Adjust VOLUME control for a normal listening level.
4. Set SQUELCH control	Advance SQUELCH control clockwise until noise just stops.
The radio will now receive all traffic on the selected channel.	
5. Enable QT If so programmed.	Press the MONITOR switch to OFF.
You will now hear messages for your system only.	

#### 3. TO TRANSMIT (In case a microphone is connected)

Operation	Procedure
1. Disable QT	Depress MONITOR switch on front panel or microphone.
2. LISTEN	DO NOT TRANSMIT if channel is in use.
3. Key transmitter	Press and hold the microphone PTT switch. The Red LED on the front panel will glow indicating the transmitter is ON.
4. Transmit message	Hold microphone at about 2 inches distance and speak at a normal voice level. Keep transmissions brief.
5. Receive reply	Release the microphone PTT switch.
6. Enable QT at end of the conversation If so programmed.	Depress MONITOR to the out position.

## GENERAL

### 4. DURING OPERATION OF REPEATER

Operation	Procedure
1. Enable repeat	Press the REPEAT switch to ON.
2. Start of repeat	When a signal including the object tone signal (provided that it has been programmed) is input and if its level is higher than the preset squelch level, a signal modulated by the set tone signal (provided that it has been programmed) and received audio signal is transmitted.
3. End of repeat	When the received signal disappears, the transmission is stopped after the set period of time. There indicator lights while the signal is transmitted.
4. Disable repeat	Press the REPEAT switch again to OFF.

### PRE-INSTALLATION CONSIDERATIONS

#### 1. UNPACKING

Unpack the radio from its shipping container and check for accessory items. If any item is missing, please contact KENWOOD immediately.

#### 2. LICENSING REQUIREMENTS

Federal regulations require a station license for each radio installation (mobile or base) be obtained by the equipment owner. The license is responsible for ensuring transmitter power, frequency, and deviation are within the limits permitted by the station license.

Transmitter adjustments may be performed only by a licensed technician holding an FCC first, second or general class commercial radiotelephone operator's license. There is no license required to install or operate the radio.

#### 3. PRE-INSTALLATION CHECKOUT

##### 3-1. Introduction

Each radio is adjusted and tested before shipment. However, it is recommended that receiver and transmitter operation be checked for proper operation before installation.

##### 3-2. Testing

The radio should be tested complete with all cabling and accessories as they will be connected in the final installation. Transmitter frequency, deviation, and power output should be checked, as should receiver sensitivity, squelch operation, and audio output. QT equipment operation should be verified.

### 4. PLANNING THE INSTALLATION

#### 4-1. General

Inspect the vehicle and determine how and where the radio antenna and accessories will be mounted.

Plan cable runs for protection against pinching or crushing wiring, and radio installation to prevent overheating.

#### 4-2. Antenna

When an outdoor antenna is to be installed, select an unobstructed position with good visibility.

The VSWR of the antenna should be no more than 2.

Select a coaxial cable with as small loss as possible, and its length should be as short as possible.

#### 4-3. Radio

Install the radio on a rack using rack-mount brackets, or on a flat surface that can withstand its weight. Do not install the radio in a place subject to direct sunlight or near heating equipment. Avoid wet place, and install it in a well-ventilated place.

#### 4-4. AC power supply

This unit has been designed for use exclusively with commercial AC power supply. As the rated current for transmission output attains about 2A, connect the unit to a wall outlet that can handle this current with margin.

### SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained in this manual.

## SYSTEM SET-UP

**Preparation :** Prepare an EEPROM writer, KPT-20 or KPT-50.

## INSTALLATION

### Installing the EEPROM of Signaling Unit

**Note :** EEPROM is inserted into the Signaling unit of the TKR-820. Install it after writing the data using the ROM writer (KPT-20 or KPT-50).

1. Remove the 10 screws ( ❶ ) holding the upper case to remove the upper case.

2. Remove the 11 screws ( ❷ ) retaining the shield cover to remove the shield cover.
3. Insert the EEPROM ( ❸ ) on which the data has been written into the IC socket (IC10) on the Signaling unit.

## INSTALLATION

### Installing the Duplexer

**Note:** When installing the duplexer in the TKR-820, use the either of the following products ;

1. CELWAVE (USA), 435 to 470MHz (PD633-6A)
2. ANTEN CORPORATION (JAPAN),  
450 to 470MHz (L79-0691-05)  
400 to 430MHz (L79-0896-05)

1. Remove the 10 screws ( ❶ ) holding the upper case to remove the upper case.
2. Remove the 4 screws ( ❷ ) holding the lower case to remove the lower case.

3. After removing the upper and lower cases, turn the set upside down, as shown in the figure ( ❸ ).
4. Remove the coaxial cables ( ❹ , ❺ ) connected to the TX and RX antenna connectors.

## INSTALLATION

5. Mount the duplexer (8) using the mounting hardware (6) and the 8 screws (7) provided with the set.
6. Connect the one end of the connector cable (9) provided with the set to the duplexer antenna connector and the other end to the ANT (center) of the duplexer.
7. Connect the connector cable (10) wired from the TX section and the connector cable (11) wired from the RX section to the duplexer.

ex. CELWAVE'S duplexer

**Note :** The input/output connectors of the duplexer manufacture by CELWAVE or ANTEN are located as shown in the figure. Pay attention when connecting the connectors (as input/output location is reversed).

**Note :** When making adjustments after installing the duplexer, remove the front panel and hold down the sub-panel (12), then perform adjustments from the adjusting holes (13).

# TKR-820/N/A

## INSTALLATION / CONVERSION

### Attaching the Rack-mount Brackets (for EIA racks)

The brackets and screws are optional.

- Brackets : J21-4250-04 (Common for left and right)
- Screw : N09-0704-05 (Use 2 screws per bracket)

1. Attach the 2 brackets ( ❶ ) using 4 screws ( ❷ ).

2. When the TKR-820 is to be mounted vertically ;  
Attach 4 brackets ( ❸ ), using 8 screws ( ❹ ), to the  
sides of the bottom panel.

### CONVERSION

#### Signaling Wait Mode Setting Method

##### • What is the signaling wait mode?

The KPT-20 or KPT-50 can write signaling codes into channels 1 to 16. The codes written in up to eight channels can be used at a time, and the codes written in channels 1 to 8 are effective. One or more signaling codes to be waited for in the repeater mode can be selected. They can be changed by W4 of the Signaling unit (X52-3140-XX).

##### • Wait mode setting method

Ref. No.	Function	Mode	Setting
W4	Decode change in repeater mode	Short	Two or more codes
		Open	One code

Factory setting : Short

W4 part No. : E31-1448-05

If the signaling wait is one code (W4 : open), the TKR-820/N uses the code written in channel 1, and the TKR-820A uses the signaling code in the displayed channel. If several codes are waited for (W4 : short), the multiple signaling codes written in channels 1 to 8 can be waited for.

**Note :** This function is available in serial No. 504XXXXX or later, and IC8 (27C256QJESB) or later.

#### SIGNALING UNIT (X52-3140-XX)

## CONVERSION

### Modification of the DC Switching Circuit (For Backup during a Power Failure)

#### : Excluding TKR-820A (M5, M6)

The following parts (optional) are required for the circuit modification.

Diode (S25VB10).....	1 pc.
DC cable (E30-2076-10) .....	1 pc.
Connector with lead wires (E31-3389-05) ...	1 pc.
Connector with lead wires (E31-3455-05) ...	1 pc.
Screw (N87-4014-46) .....	1 pc.

1. From the cover ( **1** ) attached to the rear panel, remove the 2 screws ( **2** ) and take off the cover.

2. Insert the connector with lead wires ( **3** ) into the hole on the rear panel ( **4** ) (so that the red lead is on the right).
3. Place the diode ( **5** ) so that its notch faces the direction shown in the illustration, and attach it using a screw ( **6** ).
4. Disconnect the connector ( **7** ) from the OUT terminal of the AVR unit, and connect its lead wire to pin 1 of the diode ( **5** ).

## TKR-820/N/A

## CONVERSION

5. Connect the optional connector with lead wires (8) to the OUT terminal of the AVR unit and to pin 3 of the diode.
6. Connect the red lead (9) of the optional connector with lead wires to pin 2 of the diode, and its black lead (10) to the negative (-) terminal of chemical capacitor C101. Do not disconnect the lead wire which has been connected to the C101 negative terminal, but connect the black lead to it.

7. Connect the optional DC cable to the connector on the rear panel (11).

## TKR-820/N/A

### DISASSEMBLY FOR REPAIR

#### How to Remove the Case

1. Remove the 10 screws (1) holding the upper case to remove the upper case.
2. Remove the 4 screws (2) holding the lower case to remove the lower case.

#### Disassembling the Transmitter/Receiver Section

##### 1. How to remove the transmitter/receiver section

1. Remove the 4 connectors (CN1 to CN4) connected to the panel (Display unit) (1).
2. Remove the 3 screws (2) holding the transmitter/receiver section.
3. While lifting up on the transmitter/receiver section (3), remove the power supply connector (4) and the connector cables (5, 6) connected to the frame, and restore the transmitter/receiver section in place.
4. Remove the 4 screws (7) holding the transmitter/receiver section to the frame to remove the transmitter/receiver section.

# TKR-820/N/A

## DISASSEMBLY FOR REPAIR

### 2. How to remove the TX-RX unit

1. Remove the 6 screws (1) retaining the shield cover to remove the shield cover.
2. Remove the 2 connectors (2) of the Signaling unit and the 6 screws (3) retaining the shield cover to remove the shield cover.
3. Remove the 6 screws (4) retaining the connectors CN2 to CN4.
4. Remove the 11 screws (5) attached on the bottom of the TX-RX unit to remove the shield cover.
5. Remove the 3 connectors CN1 (6), CN8 (7) and CN10 (8) connected to the TX-RX unit.
6. Remove the 4 screws (9) connected between the TX-RX unit and Final unit.
7. Remove the leaf spring fixing the two IC's to the frame with a screwdriver, etc. (10).
8. Remove the 11 screws (11) mounting the TX-RX unit to remove the TX-RX unit.

## TKR-820/N/A

### DISASSEMBLY FOR REPAIR

#### 3. Disassembling the Final ass'y unit

1. Remove the 4 screws (1) retaining the shield cover to remove the shield cover.
2. Remove the 2 screws (2) retaining the power module IC to the heat sink.
3. Remove the screw (3) retaining the transistor to the heat sink.
4. Remove the 2 screws (4) retaining the power supply cables.
5. Remove the 8 screws (5) retaining the Final PC board to remove the Final PC board.

**Note :** When replacing only the power module IC, remove the screws (2) and then remove the 5 soldered parts of the power module IC's terminals (6) to remove the power module IC.

#### How to Remove the Panel

1. Pull off the VOLUME, SQUELCH and CHANNEL knobs (1). CHANNEL knob is TKR-820A only.
2. Release the 6 hooks (2) located on the upper and lower section, and holding the sub-panel by pushing them up with your finger. Then remove the sub-panel (3) by pulling it out toward the front.

\* : TKR-820A only

# TKR-820/N/A

## DISASSEMBLY FOR REPAIR

### Disassembling the Sub-panel

1. TKR-820/N  
Remove the 2 nuts and 2 washers holding the VOLUME and SQUELCH VRs (1).
- TKR-820A  
Remove the 3 nuts and 3 washers holding the VOLUME, SQUELCH and CHANNEL VRs (1).  
Then remove the 2 screws (2) holding the POWER switch.
2. Remove 2 of the screws (3) holding the sub-panel, and loosen the other 2 screws (4), then tilt the sub-panel toward the front (5).
3. Remove the 5 connectors (6) connected to the Display unit, and remove the connector (7) connected to the POWER switch.
4. Remove the 2 remaining screws (8) holding the sub-panel to remove the sub-panel.

5. Remove the 9 screws (9) holding Display unit (A/4) and (B/4) to the sub-panel, and remove the Display unit (A/4) and (B/4).
6. Remove the 4 screws (10) holding the speaker to the sub-panel to remove the speaker.

# TKR-820/N/A

## DISASSEMBLY FOR REPAIR

### Disassembling the AVR Unit

#### 1. How to remove the AVR unit (X43-3040-10) (A/2)

1. Remove the 8 connectors (1) connected to the AVR unit.
2. Remove the 4 screws (2) holding the AVR unit to the rear panel, and remove the AVR unit from the rear panel.

#### 2. Disassembling the AVR unit (X43-3040-10) (A/2)

1. Remove the 4 screws (3) holding the AVR unit.
2. Desolder the 4 wires (4) connected to the bases and emitters of transistors Q5 and Q6.
3. Remove the 2 screws (5) on the radiation cover attached to the heat sink to remove the radiation cover.
4. Remove the 4 screws (6) of the transistors (Q5 and Q6) attached to the heat sink, and remove the AVR unit (A/2).

## TKR-820/N/A

## DISASSEMBLY FOR REPAIR

**3. How to remove the AVR unit (X43-3040-10) (B/2) and the electrolytic capacitor (C101)**

1. Remove the 4 wires (7) holding to the AVR unit.
2. Remove the 4 screws (8) holding the AVR unit to remove the AVR unit.
3. Remove the 3 screws (9) holding the electrolytic capacitor (C101).

**4. How to remove the power transformer**

1. Remove the 4 screws (10) holding the power transformer to the bottom plate, and remove the power transformer.

# N/A TKR-820/N/A

## BLOCK DIAGRAM

## CIRCUIT DESCRIPTION

### Transmitter Circuit

The signal generated at the transmitter frequency synthesizer is amplified by RF amplifier transistors Q1 (2SC3357) and Q2 (2SC2954) and amplifier module IC1 (M57729) to a level of 25W in the power amplifier unit. The signal is then routed to the antenna connector after going through a harmonics filter.

The transmitter output is detected by D3, 4 (1SS101) and is converted to a DC form. The DC signal thus detected is level adjusted by APC control (VR1) and is applied to the base of Q6 (2SC3326A). The base current of Q3 (2SB946Q) is varied according to the difference from the comparison voltage at Q5, 6 (2SC3326A) so that the collector voltages of Q2 (2SC2954) and the IC1 first stage are controlled to maintain the transmitter output level constant.

In the event an abnormal temperature rise occurs, the temperature is sensed by a thermister (TH1) and reduces the output power to a safe level.

The harmonics filter is of a fifth order Butterworth type lowpass filter having a minimum attenuation of more than 55dB at the second harmonics frequency with a passband insertion loss of less than 0.5dB. With a characteristics of the transmitter final power amplifier module, which has more than 30dB of attenuation for the frequency at the second harmonics or higher, total attenuation of harmonics is more than 70dB.

Fig. 1 Transmitter block diagram

## CIRCUIT DESCRIPTION

## Receiver Circuit

An incoming RF signal from the antenna is fed into a bandpass filter (L7). Then eliminated RF signal pass a protector D3 (1SS226).

The signal is then amplified by an RF amplifier (Q3, 2SC3358K) and filtered again by bandpass filters (L9 and L10). After amplification and filtering, the signal is applied to a double balanced modulator (DBM, D4, ND487C1-3R) for mixing with the first local signal generated at the common frequency synthesizer.

The heterodyning action of the first mixer produces a 21.4MHz first intermediate frequency (1st IF), which is applied to a 6-pole monolithic crystal filter (MCF, XF1) after being amplified by a buffer amplifier (Q4, 2SK125 and Q5, 2SK125 connected in parallel). The signal out of the MCF is further amplified by a 1st IF amplifier (Q6, 2SK302GR) and sent to the IF unit (Z8).

The signal applied to Z8 is mixed with a 20.945MHz signal at IC1 in Z8, which produces a 455kHz 2nd IF signal. The signal obtained at the 2nd mixer is filtered by a 455kHz ceramic filter (CF1) and amplified by limiting amplifier stages in IC1. The recovered audio signal from the incoming signal is also obtained at IC1 by a quadrature type FM detector. This recovered audio signal is then sent to the audio amplifier circuit and to the noise actuated squelch circuit.

In the receiver audio amplifier section, the recovered audio signal from Z8 is first applied to a bandpass filter/voltage controlled amplifier (BPF/VCA, Z9) unit. At this BPF/VCA unit, the signal is amplified and sent to pin 9 of CN6 as the DET signal. The signal is returned to Z9 by way of the Signaling unit. IC1 (NJM4558M) forms a lowpass filter and a highpass filter, and IC2 forms a bandpass filter and lowpass filter in Z9. The frequency components below 300Hz and above 3000Hz are attenuated in the above filter circuits.

The filtered audio signal is then applied to an electronic volume control (IC3, M5222FP), where the audio signal level is controlled by a DC voltage sent from the front panel volume control. The signal is then de-emphasized and sent to the audio power amplifier circuit (IC1,  $\mu$ PC1242H) after going through squelch switches (Q9 and Q10, 2SC3326A).

The alert signal is also applied to IC1, when a specific signaling board, which requires an audible alert through the speaker, is installed. The signal, which is amplified by IC1, drives either the internal speaker or the optional external speaker and this selection is done through the accessory connector located on the Final unit.

Fig. 2 Receiver block diagram

# TKR-820/N/A

## CIRCUIT DESCRIPTION

### Squelch Circuit

The high frequency component of the recovered audio signal is fed to a noise amplifier within IC1 (MC3361BD) of Z8 and it is further amplified by an external noise amplifier (Q1, 2SC2712Y). The signal is then detected by a noise detector (D1, DA204K) and applied to the squelch switch in IC1. This detected noise is also routed to the squelch control (VR1) through the Display unit (C/4) for adjusting the noise squelch sensitivity.

The busy information is sent from the above IC1 ( $\mu$ PD75104G) in the Display unit in serial format to turn on or off the busy LED. The squelch switch output and the audio control (AC) signal from the signaling board are combined at D8 (1SS184) and applied to squelch

switch transistors Q9 (2SC3326A) and Q10 (2SC3326A) along with the inverted signal of transmit/receive control signal. The squelch switch controls the input signal to the audio amplifier to mute or unmute the receive audio.

While the busy LED is being controlled only by the noise squelch circuit, the actual audio signal is controlled by the following signals and in order to unmute the audio, each signal must be in the condition as specified.

- SQL signal = Low
- R8 line = High
- T/R signal = High
- AC signal = Low

Fig. 3 Squelch circuit

## CIRCUIT DESCRIPTION

**RX Frequency Synthesizer**

The RX frequency synthesizer consists of three major circuits. They are the temperature compensated crystal oscillator (TCXO, Z3), RX voltage controlled oscillator (RX VCO, Z2) and RX phase locked loop unit (RX PLL, Z1).

The TCXO is operating at 12.8MHz and its frequency stability is maintained within  $\pm 2.5$ ppm from  $-30^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ . This output signal is fed to the frequency synthesizer IC (IC2, JLC1075DW) in Z1. At IC2, this signal is divided by 1024 to become a 12.5kHz reference signal.

The output from the RX VCO operates at the frequency of the receiver first local signal and a portion of the signal is fed to a dual modulus counter formed by IC1 (MB504F) and IC2 in Z1. IC1 divides the incoming signal by 1/64 or 1/65 depending on the control line status sent from IC2. The output of the dual modulus counter is also a 12.5kHz and this signal is compared against the 12.5kHz reference signal in a phase comparator at IC2. The output signal from the phase comparator is then fed back to the RX VCO after going through a charge pump and a lowpass filter to maintain the RX VCO frequency.

If this RX frequency synthesizer phase locked loop becomes UNLOCK, the unlock condition is detected by IC2 and it prevents the transmitter frequency synthesizer from sending a transmitter signal to following amplifier stages in order to prevent an unauthorized transmission.

**TX Frequency Synthesizer**

The TX frequency synthesizer consists of three major circuits. They are the modulator/voltage controlled crystal oscillator (VCXO, Z6), TX voltage controlled oscillator (TX VCO, Z5) and TX phase locked loop unit (TX PLL, Z4).

The audio signal from the microphone amplifier and the Signaling unit is applied to the TX VCO (Z5) and the VCXO (Z6) operating at 12.8MHz to obtain an FM modulated signal. And its frequency stability is maintained within  $\pm 2.5$ ppm from  $-30^{\circ}\text{C}$  to  $+60^{\circ}\text{C}$ . This output signal is fed to the frequency synthesizer IC (IC2, JLC1075DW) in Z4. At IC2, this signal is divided by 1024 to become a 12.5kHz reference signal.

The output from the TX VCO operates at the frequency of the transmit signal and a portion of the signal is fed to a dual modulus counter formed by IC1 and IC2 in Z4. IC1 divides the incoming signal by 1/64 and 1/65 depending on the control line status sent from IC2. The output of the dual modulus counter is also a 12.5kHz and this signal is compared against the 12.5kHz reference signal in a phase comparator at IC2. The output signal from the phase comparator is then fed back to the TX VCO after going through a charge pump and a lowpass filter to maintain the TX VCO frequency.

If this TX frequency synthesizer phase locked loop becomes UNLOCK, the unlock condition is detected by IC2 and it prevents the transmitter frequency synthesizer from sending a transmitter.

**Microphone Amplifier**

The audio signal originating at the microphone is applied to a microphone amplifier unit (Z7) after going through a microphone sensitivity control (VR1).

The signal is amplified and voltage limited by IC1 and IC2 in Z7, then applied to an active lowpass filter/pre-emphasis network (IC3).

The processed audio signal is sent to the modulator/voltage controlled crystal oscillator (VCXO, Z6) and voltage controlled oscillator (TX VCO, Z5) in the transmitter frequency synthesizer via IC3.

# CIRCUIT DESCRIPTION

Fig. 4 PLL & Modulation circuit block diagram

## Reset Circuit

Upon initial power up, the line voltage gradually increases and this causes the reset system (IC3) to generate a reset pulse. This reset pulse is applied to the microprocessor (IC1) to insure the initialization of the circuit.

Fig. 5 Reset circuit block diagram

## TKR-820/N/A

## CIRCUIT DESCRIPTION

**EEPROM Programming**

Programming of data into the EEPROM (IC2) in the Display unit is done by connecting the KPT-20 or KPT-50 programmer to the transceiver by cable provided with the KPT-20 or KPT-50. When the programmer is connected to CN1 in the Display unit, this causes microprocessor IC1 to go into reset condition. In the reset condition, the output ports of IC1 becomes high impedance and are isolated from the data transfer lines. This permits data transfers between the programmer and the EEPROM.

**Signaling Unit****• Decoder operation**

The receive audio signal from the receiver section is fed to the Signaling unit. A part of this signal is returned to the receive audio amplifier circuit and fed to mute circuit after going through an active high-pass filter, in which any frequencies below 300Hz are removed. The mute circuit control a transfer audio signal by microprocessor. The other part of the audio signal is fed through a fifth-order active low-pass filter, of which the cut-off frequency is set at 220Hz, to discriminate the QT and DQT signals from other audio signals.

The QT tone obtained from the above filtered audio signal is applied to the microprocessor (IC11) as an analog signal for tone detection after being amplified by IC4 (2/2).

The DQT code is passed through a low-pass filter IC3 (2/2), of which the cut-off frequency is 140Hz, and the circuit consists of IC3 (1/2) and IC5 (1/2), where the DC drift component (low frequency) is removed from the signal. The signal is then amplified by IC5 (2/2). The amplified signal is applied to IC1 after waveform shaping by Q2.

IC11 sends an audio control signal (AC) to the AC terminal of CN1 through an inverter (Q4) according to the status of the incoming signal. If the incoming QT tone or DQT code matches the data stored, the AC terminal of CN1 is forced to become "LOW" to unmute the receive audio circuit.

**• Monitor circuit**

The RESET terminal of CN1 is connected to the MONITOR and MIC MONITOR circuits in the repeater.

The RESET terminal signal level goes to "HIGH" state, if either the MONITOR switch is on or the microphones MONITOR switch is on, causing pin 4 (RESET) of IC11 to become "HIGH". In this condition, the AC terminal of CN1 is held "LOW", enabling only the noise actuated squelch operation.

**• Encoder operation**

In the transmit mode, the PTT terminal of CN1 becomes "LOW" and this information is inverted to "HIGH" by Q7 before being applied to IC11. Upon receipt of this PTT signal or when the programmed tone has been decoded at the time of the REPEAT operation, IC11 starts the encode function. The encode signal is sent out from output ports, A/D 0 through A/D 7, of IC11 in a binary format and is fed to a ladder network resistor (CP1) for Digital-to-Analog signal conversion. The output signal from CP1, which is either the QT tone or the DQT code, is routed to the TONE terminal of CN1 after going through a level control for modulating the transmit signal.

**• Local/Repeater operation**

When the REPEAT switch on the front panel of the main body is set to ON, the repeater operation is engaged, while when this switch is set to OFF, the full-duplex transceiver operation is engaged.

**• Preset squelch operation**

The squelch circuit for the repeater operation which is independent from the main body consists of noise conditioner IC6 (1/2), waveform shaper Q1, microprocessor IC11 and squelch sensitivity adjuster VR1.

The preset squelch level, the hangup timer time and the time-out timer time are compared in IC11 respectively with the voltages at pins 30, 29 and 28 set by VR1, VR2 and VR3 with the reference of the voltage at pin 31 of IC11 and are thus subject to software control.

## CIRCUIT DESCRIPTION

### TAKEOVER Switch

The TAKEOVER switch is used to isolate the remote control. (The remote control is isolated when the TAKEOVER switch is pressed.)

The following table shows the functions and specifications of the accessory connector terminals, together with the control terminals that are subject to the TAKEOVER control.

#### • Accessory connector

No.	Name	Functions & Specifications	Terminal subject to TAKEOVER control
1	HK	External hook terminal / Set this terminal to GND level before using external PTT. Unlike MIC HOOK, no monitor function is provided.	○
2	LG	Line input GND / Used for No. 5 (LI).	
3	DI	Direct modulation input terminal / External input terminal for QT and DQT : $\pm 750\text{Hz DEV}$ at approx. $600\Omega$ input impedance, $0.2V_p\text{-p}$ . Degree of modulation is to be adjusted externally.	
4	DE	Direct detection output / Direct output of detected (unfiltered) signal : Output impedance $10k\Omega$ . Output level : $-10\text{dBs}$ at $\pm 3\text{kHz DEV}$ , $1\text{kHz}$ .	
5	LI	Line input / input terminal for external modulation. Standard modulation is provided at $600\Omega$ , $0.24\text{dBm}$ . Same as MIKE level except for input level.	○
6	SG	Speaker output GND / GND for output to external speaker. Used for No.12 (SO).	
7	SB	+13.6V external power output / Power supply for external equipment. Up to 1A.	
8	PT	External PTT input / Transmission is started at GND level if No. 1 (HK) is at GND level.	○
9	SI	Internal speaker input / Usually connected to No. 12 (SO) via jumper wire.	
10	DE	Line output / Used for output of received signal, for standard modulation at $600\Omega$ , $-10\text{dBm}$ , $-6\text{dB/oct}$ , $300\text{Hz}$ to $3\text{kHz}$ . Interlocked with No.13 (CO).	○
11	GN	DC GND / GND for DC power supply.	
12	SO	Speaker output / Output terminal for external speaker.	
13	CO	Internal preset squelch output / Provides an output interlocked with internal preset squelch, or a tone squelch output when writing tone. When receiving signal, this output is at low level (open collector) with $10\text{mA}$ sink current.	
14	NC	Unused.	
15	NC	Unused.	

## CIRCUIT DESCRIPTION

## AVR Circuit

This power supply uses a tapped secondary transformer to maintain low voltage between the pass transistor collectors and emitters (Q5 and Q6) for excellent efficiency. Control and operating voltages are rectified and supplied independently for good ripple characteristics.

Temperature compensation for the regulator Zener diode D5 and error amplifier transistor Q4 is provided by silicon diodes D4 and D6.

At initial POWER-ON Q3 is ON to turn-down Q4 base voltage. This prevents a surge voltage from being output when no load is connected. As C5 charges, Q2 turns ON to shut Q3 OFF. Q4 is thereafter fully ON.

If the load is shorted, comparator Q1 is turned OFF and current proportional only to that in the initial turn-on circuit is output. When the output is shorted, the output current drops to 1A. This circuit protects the pass transistors, transformer and full wave bridge rectifies from thermal damage.

Changing between AC and DC is done with the DC switch (D101) for the TKR-820A only. The output from the AVR unit and the DC input from the external power input terminals are changed automatically.

# DISASSEMBLY

## DISASSEMBLY

PACKING

## ADJUSTMENT

### Test Equipment Required for Alignment

Test Equipment	Major Specifications	
1. Standard Signal Generator (SSG)	Frequency range Modulation Output	340 to 520MHz Frequency modulation and external modulation 0.1µV to greater than 1mV
2. Power meter	Input impedance Operation frequency Measurement capability	50Ω 340 to 520MHz or more Vicinity of 50W
3. Deviation meter	Frequency range	340 to 520MHz
4. Digital Volt Meter	Measuring range Accuracy	1 to 10V DC High input impedance for minimum circuit loading
5. Oscilloscope		DC through 30MHz
6. High sensitivity frequency counter	Frequency range Frequency stability	10Hz to 600MHz 0.2ppm or less
7. Ammeter		15A
8. AF Volt Meter (AF VTVM)	Frequency range Voltage range	50Hz to 10kHz 3mV to 3V
9. Audio Generator (AG)	Frequency range Output	50Hz to 5kHz or more 0 and 1V
10. Distortion meter	Capability Input level	3% or less at 1kHz 50mV to 10Vrms
11. Voltmeter	Measuring range Input impedance	10 to 1.5V DC or less 50kΩ/V or greater
12. 4Ω dummy load		Approx. 4Ω, 3W

The set has been adjusted for the frequencies shown in the following table. When required, re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

Type	CH	RX freq' (MHz)	TX freq' (MHz)
K,M,NM,AM		469.900	464.900
K2,M2		489.900	484.900
K3,M3		511.900	506.900
K4,M4,NM4,AM4		429.900	424.900
M5,AM5	1	359.900	354.900
	8	358.900	352.400
	16	357.400	349.900
M6,AM6	1	379.900	374.900
	8	378.900	372.400
	16	377.400	369.900

### Signaling

CH	RX		TX	
	QT (Hz)	DOT	QT (Hz)	DOT
1	210.7			023
2	67		77	
3	192.8		179.9	
4	77			754
5	88.5		167.9	
6	100			351

TKR-820 : K,K2,K3,K4,M,M2,M3,M4,M5,M6

## ADJUSTMENT

## Alignment

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
1. Setting	1) AC voltage for destination : 120V <b>K,K2,K3,K4</b> : 220V <b>M,M2,M3,M4,M5,            M6,NM,NM4,AM,            AM4,AM5,AM6</b> 2) Connect to the DC output (OUT terminal) and GND of the AVR unit (*).	<p style="text-align: center;"><b>TKR-820</b></p>						
2. Test equipment set-up	1) Function : 0.1Ω resistor Meter : 80A, 60V DC : ON Power : ON SW1 : OFF							
3. Voltage setting	1) Power switch : ON	DVM	AVR	OUT	AVR	VR1	Adjust the load for 10A.	13.6V±0.4V (Verify power indicator lights.)
	2) Vary the load for 2A to 10A draw. (Set to 10A after check.)	DVM AF VTVM					Check	13.6V±0.7V DC Less than 30mV AC
	3) Power switch : OFF							
4. Protection	1) SW1 : ON VR2 : MAX CW. Power switch : ON	DVM	AVR	OUT	AVR	VR2	0.25V	±0.05V
	2) SW1 : OFF						Check	13.6V±0.4V
5. Setting	1) Write in frequency designed with EEPROM writer. (For frequency writing, set the power of TKR-820 to ON.) 2) Connect the power cable to the rear panel. 3) Final unit VR1 : MAX CCW. 4) TX-RX unit VR1, VR3 : MAX CCW. 5) Power switch : ON	<p style="text-align: center;"><b>TKR-820</b></p>						

## ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
6. RX PLL lock voltage		DVM	TX-RX	TP1	TX-RX	Z2	4.5V	±0.5V
7. TX PLL lock voltage				TP2		Z5	4.5V	±0.5V
8. TCXO frequency adjustment	1) PTT : OFF (RX) <b>Note</b> : TCXO is adjusted precisely at 25°C. If it is readjusted, the frequency stability is changed. Do not touch it normally.	Power meter f. counter	TX-RX	TP4 (Foil side)	TX-RX	Z3	f - 21.4MHz	±100Hz
9. Power adjustment (APC)	1) PTT : ON	Power meter Ammeter	Rear panel	TX ANT	Final	VR1	MAX CW	28W or more
							MIN	2W or less
							26W	±1W
10. Transmit frequency	1) PTT : ON	Power meter f. counter	Rear panel	TX ANT	TX-RX	Z6	Adjust the transmit frequency	±350Hz
11. DQT waveform correction (For DQT use only)	1) Connect AG to the TX-RX (TP3) and enter a square wave of 100Hz, 2Vp-p. Deviation meter filter : OFF PTT : ON	Power meter Deviation meter Oscilloscope			TX-RX	VR3	Make the demodulation waveform neat.	
12. Tone deviation adjustment	1) QT and DQT tone frequency being written. Deviation meter filter LPF : 3kHz HPF : OFF De-emphasis : OFF PTT : ON	Power meter Deviation meter	Rear panel	TX ANT	Signaling	VR4	±0.75kHz (QT) +0.9kHz (DQT)	±100Hz
13. Maximum deviation adjustment	1) Connect AG to the MIC terminal. AG : 1kHz/50mV Deviation meter filter LPF : 20kHz HPF : 50Hz De-emphasis : 750µsec. TX-RX unit VR1 : MAX CW. PTT : ON				TX-RX	VR2	±4.4kHz (±4.9kHz in use of signaling.) Adjust one more than the other by switching between -P and +P.	±200Hz
14. MIC sensitivity adjustment	1) AG : 1kHz/5mV PTT : ON					VR1	±3.0kHz (±3.75kHz in use of signaling.)	±200Hz

## ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
15. RX sensitivity adjustment		AF VTVM 4Ω dummy load	Rear panel	EXT. SP	Front panel	VOL.	0.78V/4Ω (Noise)	
<p style="text-align: center;"><b>TKR-820</b></p>								
	1) SSG output : 500μV/-53dBm MOD : OFF	SSG AF VTVM Distortion meter 4Ω dummy load	Rear panel	EXT. SP	TX-RX	L7 L9 L10	Reduce noise level using L7, L9 and L10. Decrease the SSG output so that noise level is always 20 to 30dB lower than 0.45V. Repeat 3 to 4 times.	
	2) SSG output : 500μV/-53dBm MOD : 1kHz DEV : 3kHz					L18	Adjust for maximum AF output.	
	3) SSG output : 0.32μV/-117dBm					L16 L17	Adjust for maximum SINAD.	
	4) SSG output : 500μV/-53dBm				Front panel	VOL.	0.45V/4Ω	
							Check	SINAD 12dB or more.
					Front panel	VOL.	4.0V/4Ω	
							Check	S/N 45dB or more. Distortion : 5% or less.
16. Squelch	1) SSG output : OFF Rotate SQL VR to a point at which noise disappears.	SSG AF VTVM 4Ω dummy load	Rear panel	EXT. SP			Check	SQL index angle 8 : 00 - 10 : 00
	2) SSG output : 124dBm	Oscilloscope						Squelch should open.
17. Preset squelch adjustment	1) Signaling unit VR1 to VR5 : MAX CCW. SSG output : OFF	SSG			Signaling	VR1	Check MAX CW.	D7 : LED should light. D7 : LED should go out.
	2) SSG output : 0.19μV/-121.5dBm <b>K, K2, K3, K4, M, M2, M3, M4, NM, NM4, AM, AM4</b> SSG output : 12dB SINAD sensitivity -3dB. <b>M5, M6, AM5, AM6</b>						Rotate VR1 CCW, to a point at which D7 lights.	

## ADJUSTMENT

Item	Condition	Measurement			Adjustment			Specifications/Remarks
		Test-equipment	Unit	Terminal	Unit	Parts	Method	
18. Hangup timer adjustment	1) SSG output : 1.59 $\mu$ W/-103dBm The set time can be continuously varied by VR2. 0 ~ 5V $\rightarrow$ 0 ~ 5 sec.	DVM	Signaling	TP2	Signaling	VR2	1.0V	$\pm$ 0.1V
	2) SSG output : 501 $\mu$ W/-53dBm REPEAT switch : ON	Power meter SSG	Rear panel	TX ANT RX ANT			Check	TX LED should light. REPEAT LED should light.
	3) SSG output : OFF							TX LED should go out about 1 sec. later after turning SSG OFF.
19. T.O.T	1) The set time can be continuously varied by VR3. 0 ~ 0.3V : OFF ~ 0.5V : 30 sec. ~ 5V : ~ 5 min.	DVM	Signaling	TP1	Signaling	VR3	Set it to the target time.	
20. Repeater TX deviation	1) SSG output : 501 $\mu$ W/-53dBm	Power metr SSG Deviation meter	Rear panel	EXT. SP	Signaling	VR5	$\pm$ 3.0kHz	$\pm$ 100Hz
21. Signaling squelch	1) SSG output : Turn the SSG output so that the SINAD sensitivity becomes 10dB.							
	2) SSG MOD SW : EXT. MOD AG1 : 1kHz AG2 : QT tone frequency							
	3) AG1 : Power switch OFF AG2 output : Adjust the output level of AG2 so that the SSG deviation becomes 0.75kHz.							
	4) AG1 : Power switch ON AG1 output : Adjust the output level of AG1 so that the SSG deviation becomes 3.75kHz. (i.e., QT tone frequency/ 0.75kHz deviation, +1kHz/3kHz deviation) MONITOR switch : OFF							
		Rear panel	EXT. SP				Check	Open.
22. TAKEOVER	1) TAKEOVER switch : ON						Check	The TAKEOVER LED should light.

## TERMINAL FUNCTION

Connector No.	Pin No.	Pin Name	Function
<b>AVR UNIT (X43-3040-10)</b>			
(A/2)		AC1	AC input for reference voltage.
		AC2	AC input for reference voltage.
		AC3	AC input for power supply.
		AC4	AC input for power supply.
		GND	GND.
		CAP	For capacitor (+).
		C	Q5, Q6 collector.
		E1	For emitter Q6.
		E2	For emitter Q5.
		GND	GND for output.
		OUT	DC 13.6V output.
		B1	For base Q6.
		B2	For base Q5.
(B/2)		A1	AC power input.
		A2	AC power input.
		SW	Fused AC output.
<b>SIGNALING UNIT (X52-3140-XX)</b>			
CN1	1	SB	Power supply input via the power switch.
	2	PTT	PTT signal input.
	3	KEY	KEY signal input.
	4	ALERT	ALERT signal output.
	5	RESET	RESET signal input.
	6	LOC/REP	REPEAT signal input.
	7	COR	Busy signal output by the internal squelch.
	8	AFO	Detection signal output.
	9	DET	Detection signal output.
	10	AC	Audio mute control signal output.
	11	GND	GND.
	12	SQL	Noise squelch signal input.
CN2	1	TONE	TONE signal (300Hz or less) output.
	2	MOD	MOD signal (300Hz to 3kHz) output.
	3	MIC MUTE	MIC MUTE signal output.
	4	GND	GND.
CN3	1	CH CLK	CH CLOCK signal input.
	2	CH DATA	CH DATA signal input.
	3	CH EN	CH ENABLE signal input.
<b>DISPLAY UNIT (X54-3070-XX)</b>			
CN1 For EEPROM writer	1	DO	EEPROM data output.
	2	DI	EEPROM data input.
	3	CLK	Clock signal input.
	4	EN1	EEPROM enable signal input 1.
	5	EN2	EEPROM enable signal input 2.
	6	RST	Microprocessor reset input.
	7	GND	GND.
	8	NC	No connection
CN2	1	CH EN	Channel enable.
	2	CH DAT	Channel data.
	3	CH CLK	Channel clock.
	4	T/R	Transmit/receive.
	5	BSY	Busy.
	6	DET	Detected signal input.
	7	AC	Audio mute control signal.
	8	MON	Monitor.
	9	CAL/COR	CALL/COR.
	10	AUX	REP/LOCAL.
	11	KEY	KEY line.
	12	P EN	RX PLL enable.
	13	P DAT	PLL data.
	14	P CLK	PLL clock.
	15	TP EN	TX PLL enable.

Connector No.	Pin No.	Pin Name	Function
CN3	1	VOL	Volume control input.
	2	SQ	Squelch control input.
	3	GND	GND.
	4	SCNS	Scan signal input.
	5	EXM	
	6	SOUT	Serial output.
	7	SIN	Serial input.
	8	SB	Switched B input.
	9	GND	GND.
	10	PTT	PTT signal output.
	11	MIC	MIC signal output.
	12	MIG	MIC GND.
	13	HK	HOOK signal output.
CN4 (B/4) For MIC	1	SB	Switched B output.
	2	GND	GND.
	3	PTT	PTT.
	4	MIG	MIC GND.
	5	MIC	MIC.
	6	HOOK	HOOK.
CN5 (B/4)	1	C5	Common 5V.
	2	MON	MONITOR signal output.
	3	AUX	AUX signal output.
	4	D/A	DEL/ADD LED signal input.
	5	DAS	DEL/ADD signal output.
	6	SCN	Scan signal output.
	7	GND	GND.
	8	SB	Switched B input.
	9	PTT	PTT signal output.
	10	MIG	MIC GND.
	11	MIC	MIC signal output.
	12	HK	HOOK signal output.
CN6	1	SP	Speaker input.
	2	GND	GND.
CN7	1	INT	Internal speaker output.
	2	GND	GND.
CN8 For ACC connector	1	NC	No connection.
	2	NC	No connection.
	3	CO	CALL/COR or BUSY signal output.
	4	SO	Speaker signal output.
	5	GN	GND.
	6	DE	Detected signal output.
	7	SI	Speaker signal input.
	8	PT	PTT signal input.
	9	SB	Switched B output.
	10	SG	Speaker GND.
	11	LJ	Line input.
	12	DE	Detected signal output.
	13	DI	Direct modulation input.
	14	LG	Line input GND.
	15	HK	HOOK signal input.
CN9 (D/4)	1	+B	Power supply input.
	2	ENC1	Encoder signal output.
	3	ENC2	Encoder signal output.
W1	1	HK	HOOK signal input.
	2	MIC	MIC signal input.
	3	MIG	MIG GND.
	4	PTT	PTT signal input.
	5	SB	Switched B output.
	6	GND	GND.
	7	SCN	Scan signal input.
	8	DAS	DEL/ADD signal input.
	9	D/A	DEL/ADD LED signal output.

## TKR-820/N/A

## TERMINAL FUNCTION

Connector No.	Pin No.	Pin Name	Function
	10	AUX	AUX signal input.
	11	MON	MONITOR signal input.
	12	C5	Common 5V output.
W2	1	ENC2	Encoder signal input.
	2	ENC1	Encoder signal input.
	3	+B	Power supply output.
<b>TX-RX UNIT (X57-3270-XX)</b>			
CN1		RX IN	Receiver signal input, coaxial connector.
CN2	1	GND	GND.
	2	VOL	Electronic volume control signal output.
	3	EXT MOD	External modulation input.
	4	MIG	MIC GND.
	5	MIC	MIC signal input.
	6	RLC	Power supply relay control signal output to the power switch.
	7	SO VR	Detection signal output to SQL volume.
	8	GND	GND.
	9	HOOK	HOOK signal (MIC hook) input.
	10	PTT	PTT signal input.
	11	SB	Power supply output via the power switch.
CN3	1	PLL DATA	PLL DATA signal input.
	2	T/R	T/R signal input.
	3	AC	Audio mute control signal input by the signaling unit.
	4	MON	MONITOR signal input.
	5	CH EN	CH ENABLE for signaling.
	6	CH CLK	CH CLOCK for signaling.
	7	BUSY	BUSY signal output.
	8	AFO	Detection signal input via the signaling unit.
	9	COR	BUSY signal output by the signaling unit.
CN4	1	AUX	REPEAT signal input.
	2	PLL CLK	PLL CLOCK signal input.
	3	TX PLL EN	TX PLL ENABLE signal input.
	4	KEY	KEY signal input.
	5	RX PLL EN	RX PLL ENABLE signal input.
	6	SP GND	Internal speaker GND.
	7	INT SP	Internal speaker output.
CN5	1	CH CLK	CH CLOCK signal output for signaling.
	2	CH DATA	CH DATA signal output for signaling.
	3	CH EN	CH ENABLE signal output for signaling.

Connector No.	Pin No.	Pin Name	Function
CN6	1	SB	Power supply output via the power switch.
	2	PTT	PTT signal output for signaling.
	3	KEY	KEY signal output for signaling.
	4	ALERT	ALERT signal input for signaling.
	5	RESET	RESET signal output for signaling.
	6	AUX	REPEAT signal output for signaling.
	7	COR	BUSY signal input by the signaling unit.
	8	AFO	Detection signal input to the signaling unit.
	9	DET	Detection signal output by the signaling unit.
	10	AC	Audio mute control signal input by the signaling unit.
	11	GND	GND.
	12	SQL	Noise squelch signal output.
CN7	1	TONE	TONE signal (300Hz or less) input.
	2	MOD	MOD signal (300Hz to 3kHz) input.
	3	MIC MUTE	MIC MUTE signal input.
	4	GND	GND.
CN8	1	GND	GND.
	2	B	Power supply input (from Final to TX-RX).
	3	B	Power supply input (from Final to TX-RX).
	4	R8	RX 8V output.
	5	T8	TX 8V output.
CN9			Filtered RX signal output, coaxial connector (for assemble line).
CN10		TX OUT	Transmission drive output, coaxial connector.
<b>FINAL UNIT ASS'Y (X60-3180-XX)</b>			
CN1		RF IN	Transmission drive output, coaxial connector.
CN2		GND	GND.
CN3		B	Power supply input.
W1	1	GND	GND.
	2	+B	Power supply output to TX-RX unit.
	3	+B	Power supply output to TX-RX unit.
	4	R8	RX 8V input.
	5	T8	TX 8V input.
W2		RF OUT	Transmission signal output, coaxial connector.

**KMC-9 (BASE MICROPHONE)****KMC-9 External View****KMC-9 Parts List**

\* : New parts

Ref. No.	New parts	Parts No.	Description
1		E23-0612-08	Crimp terminal
2		E30-2080-08	Curl cord
3		G09-0423-08	L spring
4		G09-0424-08	R spring
5		G09-0425-08	Spring A
6		G13-0877-08	Cushion
7		G13-0878-08	Cushion D
8		J02-0448-08	Rubber foot
9		N44-3018-45	Tapping screw
10		N47-3010-46	Tapping screw
11		T91-0368-08	MIC unit
12		S50-1430-08	Micro switch
13		W02-0803-08	SW unit
14		W02-0395-08	MIC AMP unit

**KMC-9 Specifications**

Type .....	Uni-directional dynamic microphone (Preamplifier built-in)
Output impedance .....	600Ω ± 30% (at 1kHz)
Sensitivity .....	-50dB ± 3dB (at 1kHz, 0dB = 1V/μ bar)
Frequency characteristic .....	300 to 3000Hz (±6dB)
Power requirements .....	13.8V DC (Supplied from the radio)
Dimensions (W x H x D) .....	70 x 162 x 150 mm (2-3/4 x 6-3/8 x 5-29/32 inch)
Weight .....	550g (1.2 lbs)

## TKR-820/N/A

## KMC-9 (BASE MICROPHONE)

**KMC-9 Disassembly for Repair****• Chassis removal**

1. Remove the four rubber feet (1).
2. Remove the four screws (2).
3. Remove the chassis (3).
4. Disconnect the 3-pin connector from the microphone amplification unit (4).

Fig. 1

**• Removal of microphone element and microphone amplification unit**

5. Remove the two screws holding cases A and B (5).
6. Remove case B (6).
7. Remove the microphone element and microphone amplification unit (7).

Fig. 2

## KMC-9 (BASE MICROPHONE)

### • Switch unit removal

8. Disconnect the 6-pin connector (8).
9. Remove the springs (L and R) (9).
10. Pull out the shaft (10).
11. Remove spring A and slider (11).
12. Remove the switch unit while pressing the two claws holding the switch unit in the direction of the arrow (12).

Fig. 3

### • Removing microphone plug

To remove the microphone plug (module) from the Main unit or from the microphone, grasp the rubber cap from up and down with your fingers (to unlock it) and pull it out.

## KMC-9 (BASE MICROPHONE)

KMC-9 Circuit Diagram

## SPECIFICATIONS

### GENERAL

Frequency Range .....	450 to 470MHz (K,M,NM,AM type) 470 to 490MHz (K2,M2 type) 490 to 512MHz (K3 type) 490 to 520MHz (M3 type) 406 to 430MHz (K4 type) 400 to 430MHz (M4,NM4,AM4 type) 340 to 360MHz (M5, AM5 type) 360 to 380MHz (M6,AM6 type)
Number of Channels .....	1 (16 : A type only)
Channel Spacing .....	25kHz (PLL channel step 12.5kHz)
Input Voltage .....	120V/220V AC 50/60Hz (Modifiable to DC backup)
Power Consumption .....	200W max.
Duty Cycle .....	50% at 20W output (100% at 5W output)
Temperature Range .....	-30°C to +60°C (-22°F to +40°F)
Dimensions .....	H : 4.72' (120mm) W : 12.99' (330mm) D : 15.08' (383mm)
Weight .....	28.66lbs (13kg)

### RECEIVER (Measurements made per EIA standard EIA-204-C)

RF Input Impedance .....	50Ω
Sensitivity	
EIA 12dB SINAD .....	0.35μV
20dB Quieting .....	0.45μV
Squelch Sensitivity .....	0.2μV threshold
Modulation Acceptance .....	±7kHz
Selectivity .....	-80dB
Intermodulation .....	-75dB
Spurious and Image Rejection .....	-85dB
Audio Power Output .....	4W at 4Ω less than 5% distortion
Frequency Stability .....	±0.00025% from -30°C to +60°C

### TRANSMITTER (Measurements made per EIA standard EIA-152-B)

RF Power Output .....	20W adjustable to 2W (Duplexer output)
RF Output Impedance .....	50Ω
Spurious and Harmonics .....	-70dB
Modulation	
Direct FM Modulation .....	F3E, ±5kHz for 100% at 1000Hz
FM Noise .....	-50dB
Microphone Impedance .....	Low impedance
Audio Distortion .....	Less than 3% at 1000Hz
Frequency Stability .....	±0.00025% from -30°C to +60°C

### SIGNALING

Maximum Number of Tone Combination .....	<table border="1"> <tr> <td>QT</td> <td>8</td> <td>7</td> <td>6</td> <td>5</td> <td>4</td> <td>3</td> <td>2</td> <td>1</td> <td>0</td> </tr> <tr> <td>DQT</td> <td>0</td> <td>1</td> <td>2</td> <td>3</td> <td>4</td> <td>5</td> <td>6</td> <td>7</td> <td>8</td> </tr> </table>	QT	8	7	6	5	4	3	2	1	0	DQT	0	1	2	3	4	5	6	7	8
QT	8	7	6	5	4	3	2	1	0												
DQT	0	1	2	3	4	5	6	7	8												

(In case of cross code operation, the maximum number of decode tone combinations is same as above. Up to eight encode tone may be programmed with any QT, DQT combinations.)

QT Decoder/Encoder	
Decoder/Encoder tone frequency .....	67.0 to 210.7Hz (in 0.1Hz steps)
Decoder response time .....	200msec. or less
Squelch tail elimination time .....	100msec.
Encoder frequency error .....	±0.05% or less
Sensitivity .....	SINAD 8dB or less
DQT Decoder/Encoder	
DQT code .....	23 bits total ; a 3-digit octal number (0 to 7 and 12 bits) with error correction (11 bits)
Decoder response time .....	250msec. or less
Turn-off code transmission time .....	156msec.
Squelch sensitivity .....	SINAD 8dB or less
Time-out-timer .....	Adjustable OFF 30sec. to 5min.
Hangup Timer .....	Adjustable 0 to 5sec.
Preset Squelch Sensitivity .....	0.2μV threshold, 12dB SINAD + 10dB or less tight
