BK PRECISION

MODEL 2120

DUAL-TRACE OSCILLOSCOPE

PARTS LIST

SCHEMATIC SYMBOL	DESCRIPTION	B & K-PRECISION PART NO.
---------------------	-------------	-----------------------------

MAIN CHASSIS ASSEMBLY

ELECTRICAL PARTS

CRT	150BTB31 Cathode Ray Tube	230-038-9-001
	CRT Socket Wire Assembly	428-172-9-015
	CRT Socket.....	749-120-9-001
F501	630 mA, 250 V, 5 x 20 mm Fast Acting Fuse (120 V Operation)	194-027-9-001
F502	315 mA, 250 V, 5 x 20 mm Fast Acting Fuse (220 V Operation)	194-026-9-001
Q503	BUX86 NPN Transistor.....	176-214-9-007
S101	3-Position Lever Switch (CH 1 AC-GND-DC)	080-030-9-001
S201	3-Position Lever Switch (CH 2 AC-GND-DC)	080-030-9-001
S501	Push-Button Switch (POWER).....	088-173-9-001
T501	Power Transformer.....	065-226-9-001
VR303, 304	500 Ω Potentiometer (CH 1 POS, CH 2 POS)	008-866-9-001
	BNC Connector (CH 1 (Y), CH 2 (X), EXT TRIG, CH 1 OUTPUT).....	772-054-9-001
	Banana Jack (Ground)	773-140-9-001
	Test Pin (Cal).....	777-079-9-001
	Trace Rotation Coil.....	047-067-9-001
	AC Power Cord.....	420-042-9-001
	AC Power Cord Receptacle.....	770-029-9-001
	2-Pin Wire Assembly (CH 1 OUTPUT BNC to PG317)	428-172-9-002
	2-Pin Wire Assembly (CH 1 VARIABLE to PG205 and CH 2 VARIABLE to PG206).....	428-172-9-003
	2-Pin Wire Assembly (Lower Front PC Board to LED801)	428-172-9-004
	2-Pin Wire Assembly (Y+ to CRT)	428-172-9-005
	2-Pin Wire Assembly (Y- to CRT)	428-172-9-006
	3-Pin Wire Assembly (CH 1 POS to PG306 and CH 2 POS to PG305).....	428-172-9-007
	3-Pin Wire Assembly (PG101 to PG303)	428-172-9-008
	3-Pin Wire Assembly (PG111 to Q503).....	428-172-9-009
	4-Pin Wire Assembly (PG102 to PG310)	428-172-9-010
	5-Pin Wire Assembly (Upper Front PC Board to PG302)	428-172-9-011
	5-Pin Wire Assembly (CRT Socket to PG104)	428-172-9-001
	6-Pin Wire Assembly (PG109 PC Board to PG304)	428-172-9-012
	6-Pin Wire Assembly (PG202 to PG308 and PG201 to PG309)	428-172-9-013
	7-Pin Wire Assembly (PG107 to PG203)	428-172-9-014

MECHANICAL PARTS

	CRT Bezel.....	380-582-9-001
	CRT Filter.....	753-031-9-001
	CRT Mounting Bracket, Bottom	250-252-9-001
	CRT Mounting Bracket, Top	250-253-9-001
	CRT Shield	256-268-9-003
	CRT Mounting Cushion, Top Front	388-114-9-005
	CRT Mounting Cushion, Bottom Front	388-114-9-006
	CRT Mounting Cushion, Top Neck Bracket.....	388-114-9-002
	CRT Mounting Cushion, Bottom Neck Bracket.....	388-114-9-003
	CRT Bracket Mounting Cushion (Used Between Upper and Lower Neck Brackets)	388-114-9-004
	Case	272-197-9-001
	Soft Handle	746-084-9-001
	Front Sub Panel, Metal.....	254-123-9-001

**COMPOSITE
499-369-9-001**

SCHEMATIC SYMBOL	DESCRIPTION	B & K-PRECISION PART NO.
MAIN CHASSIS ASSEMBLY (Continued)		
MECHANICAL PARTS (Continued)		
	Front Panel, Plastic	380-585-9-001
	Front Panel Inlay, Nameplate	260-468-9-001
	Front Panel Inlay, Controls and Indicators	260-480-9-001
	Rear Sub Panel, Metal	254-124-9-001
	Rear Panel, Plastic	380-582-9-002
	Plastic Foot and Tilt Stand Anchor	380-585-9-002
	Metal Tilt Stand	261-210-9-001
	Mounting Bracket (For CH 1 and CH 2 POS Controls)	250-254-9-001
	Mounting Bracket (For CH 1 and CH 2 VARIABLE Controls)	250-255-9-001
	Mounting Bracket (For POWER Switch)	250-256-9-001
	Standoff (For Horizontal PC Board)	759-229-9-001
	Chassis Support, Center	254-120-9-001
	Chassis Support, Right Side	254-121-9-001
	Chassis Support, Left Side	254-122-9-001
	Shield Cover Plate, CH 1 Attenuator	256-268-9-001
	Shield Cover Plate, CH 2 Attenuator	256-268-9-002
	Transformer Mounting Plate	261-211-9-001
	Metal Rod (X-Y, SLOPE Switch Linkage), 2.5 mm x 75 mm	265-049-9-001
	Metal Rod (POWER Switch Linkage), 2.5 mm x 190 mm	265-049-9-004
	Metal Rod (NORM/INV Switch Linkage), 2.5 mm x 200 mm	265-049-9-002
	Metal Rod (CH 1/CH 2, MONO/DUAL, ALT/CHOP/ADD Switch Linkage), 2.5 mm x 270 mm	265-049-9-003
	Plastic Coupler (POWER, SLOPE, and X-Y Switch Connector)	380-567-9-001
	Plastic Coupler (VERT MODE Switch Connector)	380-585-9-003
	Plastic Shaft (TRIG LEVEL Control Linkage), 6 mm x 55 mm	265-049-9-006
	Plastic Shaft (X-POS Control Linkage), 6 mm x 80 mm	265-049-9-007
	Plastic Shaft (CH 1, CH 2 VARIABLE Control Linkage), 6 mm x 125 mm	265-049-9-008
	Plastic Shaft (INTENSITY, FOCUS Control Linkage), 6 mm x 135 mm	265-049-9-005
	Plastic Universal Joint (CH 1 VARIABLE, CH 2 VARIABLE, FOCUS, etc. Control Coupler)	380-585-9-004
	Lever Switch Cap (AC-GND-DC Switches)	384-106-9-001
	Lever Switch Cap (COUPLING, SOURCE Switches)	384-106-9-002
	Pushbutton Knob, Grey (VERT. MODE, SLOPE, X-Y Switches)	384-106-9-003
	Pushbutton Knob, Red (POWER Switch)	384-106-9-004
	Knob (TIME/DIV)	751-334-9-001
	Knob (VAR SWEEP)	751-334-9-002
	Knob (VOLTS/DIV)	751-334-9-003
	Knob (CH 1 VAR, CH 2 VAR, INTENSITY, FOCUS, etc.)	751-334-9-004
	Knob (CH 1 POS, CH 2 POS)	751-334-9-005
	Insulating Spacer (For Q503)	347-137-9-001
	3 x 6 mm Phillips Round Head Machine Screw (U504, VR103, VR203, etc.)	634-228-9-001
	3 x 6 mm Phillips Flat Head Machine Screw (CH 1/CH2 POS, Case, AC Recep, Power Switch)	634-228-9-008
	3 x 6 mm Screw (Q503)	634-228-9-010
	3 x 8 mm Phillips Round Head Machine Screw (Q501, Q511)	634-228-9-002
	3 x 8 mm Phillips Wide Head Machine Screw (PC Board Mounting)	634-228-9-011
	3 x 8 mm Phillips Wide Head Machine Screw, Black (Case, CRT Bracket)	634-228-9-012
	3 x 10 mm Phillips Round Head Machine Screw (Foot Mounting, Q503, Q808, Q809)	634-228-9-003
	3 x 12 mm Phillips Round Head Machine Screw (Rear Panel, Q405, Q406)	634-228-9-004
	3 x 12 mm Phillips Head Plastic Machine Screw (U502)	634-228-9-007
	3 x 18 mm Phillips Flat Head Machine Screw (Bezel)	634-228-9-009
	4 x 6 mm Phillips Round Head Machine Screw (Soft Handle Mounting)	634-228-9-005
	4 x 10 mm Phillips Round Head Machine Screw (X-former, CRT Clamp, Ground)	634-228-9-006
	M9 x 12 mm Hex Nut (TIME/DIV Control)	653-117-9-001
	M3 x 2.4 mm Hex Nut (Q405, Q406, Q511)	653-117-9-002
	M4 x 3.2 mm Hex Nut (CAL Jack)	653-117-9-003
	3 x 7 mm Steel Washer (Q405, Q406, Q511)	724-092-9-004
	3.2 x 8 mm Steel Washer	724-092-9-001
	4 x 10 mm Steel Spring Washer (Power Transformer)	724-092-9-005
	M4 x 15 mm O.D. Toother Washer (Ground)	731-115-9-001
	4.2 x 10 mm Steel Washer (Soft Handle, Ground)	724-092-9-002
	5.2 x 12 mm Steel Washer (CAL Jack)	724-092-9-003
	Ground Lug	740-050-9-001
	Label, Case Bottom (CH 1 DC Balance)	483-680-9-001
	Label, Case Bottom (CH 2 DC Balance)	483-680-9-002
	Label, Case Bottom (X-Gain)	483-680-9-003
	Label, Case Bottom (Y-Gain)	483-680-9-004
	Label, Rear Panel, Fuse Rating	483-680-9-005
	Label, Rear Panel, Model Number	483-680-9-006
	Instruction Manual	480-537-9-001

SCHEMATIC SYMBOL	DESCRIPTION	B & K-PRECISION PART NO.
LOWER FRONT PC BOARD ASSEMBLY		
RESISTORS		
Unlisted resistors are $\pm 5\%$, 1/4 W. See schematic diagram for value.		
R102	898 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-8-983
R103	111 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-1-113
R104	988 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-9-883
R105	10.1 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-1-012
R106	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R107	20.5 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-2-052
R108	18.2 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-822
R109	2.03 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-2-031
R111	499 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-4-993
R112	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R113	750 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-7-503
R114	332 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-3-323
R115	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R202	898 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-8-983
R203	111 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-1-113
R204	988 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-9-883
R205	10.1 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-1-012
R206	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R207	20.5 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-2-052
R208	18.2 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-822
R209	2.03 k Ω $\pm 0.5\%$, 1/4 W, Metal Film	017-144-2-031
R211	499 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-4-993
R212	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R213	750 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-7-503
R214	332 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-3-323
R215	1 M Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-004
R808	10 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-002
R809	20 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-2-002
R810	40.2 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-4-022
R811	100 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-1-003
R812	200 k Ω $\pm 1\%$, 1/4 W, Metal Film	015-144-2-003
R813	397 k Ω $\pm 1\%$, 1/4 W, Metal Film	013-139-9-002
VR101	500 Ω Trimmer Potentiometer (CH 1 DC Balance)	010-046-9-003
VR102	10 k Ω Trimmer Potentiometer (CH 1 DC Balance)	010-046-9-002
VR103	500 Ω Potentiometer (CH 1 VARIABLE)	008-877-9-002
VR201	500 Ω Trimmer Potentiometer (CH 2 DC Balance)	010-046-9-003
VR202	10 k Ω Trimmer Potentiometer (CH 2 DC Balance)	010-046-9-002
VR203	500 Ω Potentiometer (CH 2 VARIABLE)	008-877-9-002
VR801	10 k Ω Trimmer Potentiometer (Timebase CAL Adjust)	010-032-9-011
VR901	200 Ω Trimmer Potentiometer (0.2 V p-p Adjust)	010-032-9-002
CAPACITORS		
C101	0.047 μ F $\pm 10\%$, 400 V, Polyester	025-278-9-004
C102	18 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-007
C103	1 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-021
C104	0.5 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-001
C105, 106	3 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-012
C107	1 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-021
C108	18 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-007
C109	1.3 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-023
C110	100 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-003
C111	18 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-007
C112	39 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-014
C113	68 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-018
C114	150 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-006
C115	15 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-005
C116	0.5 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-001
C117	3 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-012
C118	0.5 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-001
C119	3 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-012
C120	0.01 μ F $\pm 10\%$, 400 V, Polyester	025-278-9-003
C121	0.022 μ F $\pm 80/-20\%$, 50 V, Ceramic	020-423-9-034
C122	10 μ F $\pm 50/-10\%$, 50 V, Electrolytic	022-381-9-004
C123	0.022 μ F $\pm 80/-20\%$, 50 V, Ceramic	020-423-9-034
C124	5 pF ± 0.25 pF, 50 V, Ceramic	020-423-9-016
C125	27 pF $\pm 5\%$, 50 V, Ceramic	020-423-9-011
C126	0.1 μ F $\pm 5\%$, 100 V, Polyester	025-278-9-016
C127	0.022 μ F $\pm 80/-20\%$, 50 V, Ceramic	020-423-9-034

PARTS ORDERING INFORMATION

There is a minimum charge for each invoice. Orders will be shipped C.O.D. unless previous open account arrangements have been made or remittance accompanies order. Advance remittance must cover handling and postage or express charges. Specify model and serial number when ordering replacement parts.

ORDER REPLACEMENT PARTS FROM:

B & K-Precision, Factory Service Operations
Maxtec International Corporation
6470 West Cortland Street
Chicago, Illinois 60635
Telephone: (312) 889-1448

CALIBRATION PROCEDURE**WARNING**

The following instructions are for use by qualified service personnel only. To avoid electrical shock, do not perform servicing unless qualified to do so.

High voltage up to 2,000 volts is present when covers are removed and the unit is operating. Remember that high voltage may be retained indefinitely on high voltage capacitors. Also remember that ac line voltage is present on line voltage input circuits (including the fuse holder, line cord receptacle, and POWER switch) any time the instrument is plugged into an ac outlet, even if turned off. Unplug the oscilloscope and discharge high voltage capacitors before performing service procedures unless it is necessary to have the unit powered up.

This unit was carefully checked and calibrated at the factory prior to shipment. Readjustment is recommended only if repairs have been made in a circuit affecting calibration. The location of the calibration adjustments is shown in Fig. 1 and Fig. 2. Keep in mind that some calibration adjustments require high precision test instruments. Those adjustments should be attempted only if the proper test equipment is available and you are experienced in its use. Before making adjustments, allow 30 minutes warm-up time (with the case on) and adjust all front panel controls (INTENSITY, FOCUS, TRACE ROTATION, POS, etc) to optimum positions. The following test equipment is required for complete calibration:

B & K-Precision Model 2906 Multimeter or equivalent.

B & K-Precision Model 1400 Oscilloscope Calibrator or equivalent.

B & K-Precision Model 1655 Variable AC Power Supply or equivalent with 120 V, 3 A capability.

B & K-Precision Model HV-6 High Voltage Multiplier Probe or equivalent with capability of measuring at least 2 kV.

NOTE

All voltage measurements are to be taken with respect to earth (chassis) ground unless otherwise noted.

POWER SUPPLY ADJUSTMENTS

1. Plug the oscilloscope into a variable AC power supply and set the variable AC power supply output to exactly 120 V.
2. Connect the multimeter to TP+140V.
3. If necessary, adjust VR501 for a +140 Vdc \pm 1 Vdc reading on the multimeter.
4. Connect the multimeter to TP+260V.
5. If necessary adjust VR501 for a +260 Vdc \pm 5 Vdc reading on the multimeter.
6. Repeat steps two through five until no further adjustment is necessary.
7. Using a high voltage probe, measure the voltage at TP-2kV.
8. If necessary, adjust VR508 for a meter reading of -2000 Vdc \pm 5 Vdc.
9. Disconnect the oscilloscope from the variable ac power supply and plug it into a regular ac outlet.

INTENSITY ADJUSTMENT

1. Set up the oscilloscope for automatic (AUTO) sweep operation with a single-trace displayed at the center of the CRT.
2. Set the INTENSITY control fully counterclockwise.
3. Adjust VR505 until the trace is just barely visible.

ASTIGMATISM ADJUSTMENT

1. Set up the oscilloscope for X-Y operation (with no input signals) and set the FOCUS control to mid-range.
2. Adjust VR507 until the spot is as small and round as possible.
3. Release the X-Y switch.

CH 1 DC BALANCE ADJUSTMENT

1. With the channel 1 AC-GND-DC switch in the GND position, the AUTO trigger mode selected, and channel 1 single-trace operation selected, set the CH 1 VOLTS/DIV switch to 5 mV.
2. Rotating the channel 1 VAR control should cause no more than 1 minor division change in trace position. If necessary, adjust VR101 and VR102 until trace shift is 1 minor division or less when VAR control is rotated from CAL to fully clockwise.
3. Return the channel 1 VAR control to the CAL position.

NORMAL/INVERT ADJUSTMENT

1. Set the channel 1 AC-GND-DC switch to the GND position, select the AUTO trigger mode, set the oscilloscope for channel 1 single-trace display, and use the CH 1 POS control to center the trace.
2. Press and release the NORM/INV 1 switch repeatedly and observe the display. The trace should not move when switched from NORM to INV.
3. If necessary, adjust VR301 until the trace does not move when switched between NORM and INV.

CH 2 DC BALANCE ADJUSTMENT

1. With the channel 2 AC-GND-DC switch in the GND position, the AUTO trigger mode selected, and channel 2 single-trace operation selected, set the CH 2 VOLTS/DIV switch to 5 mV.

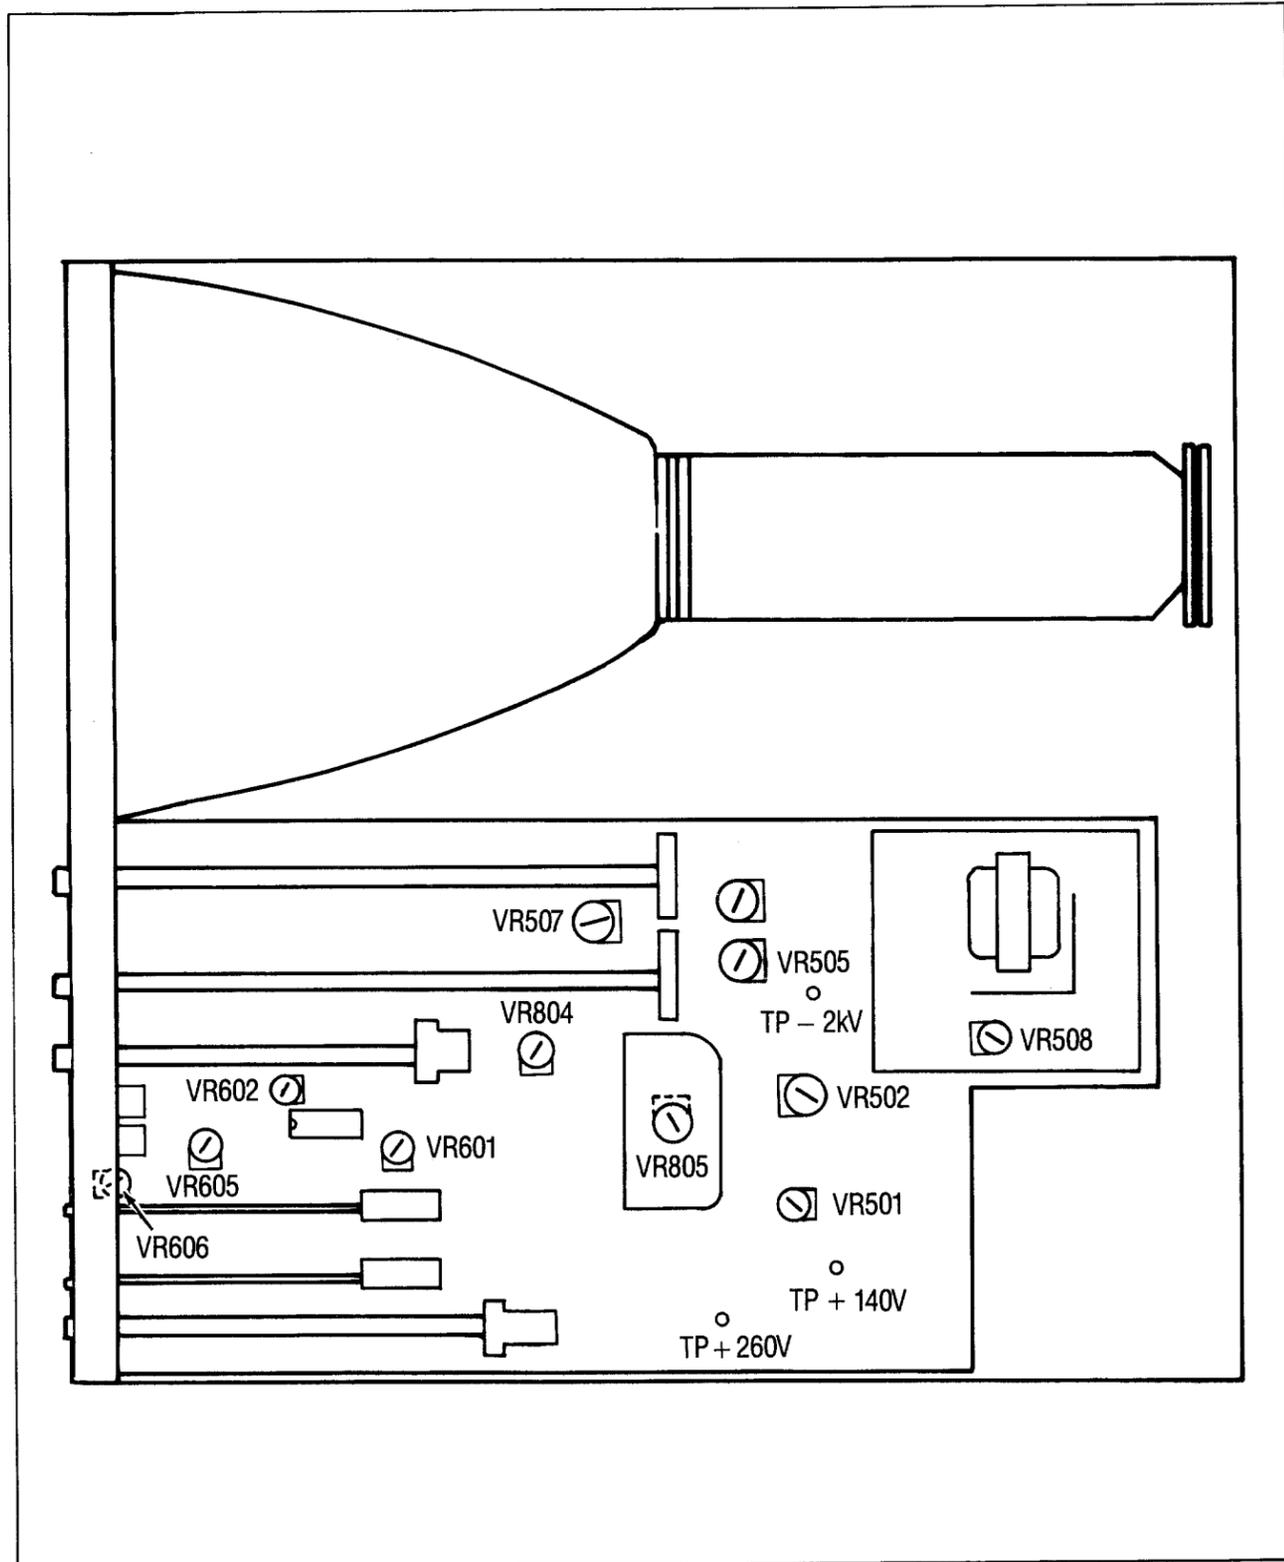

Fig. 1. Adjustment Locations (Top View).

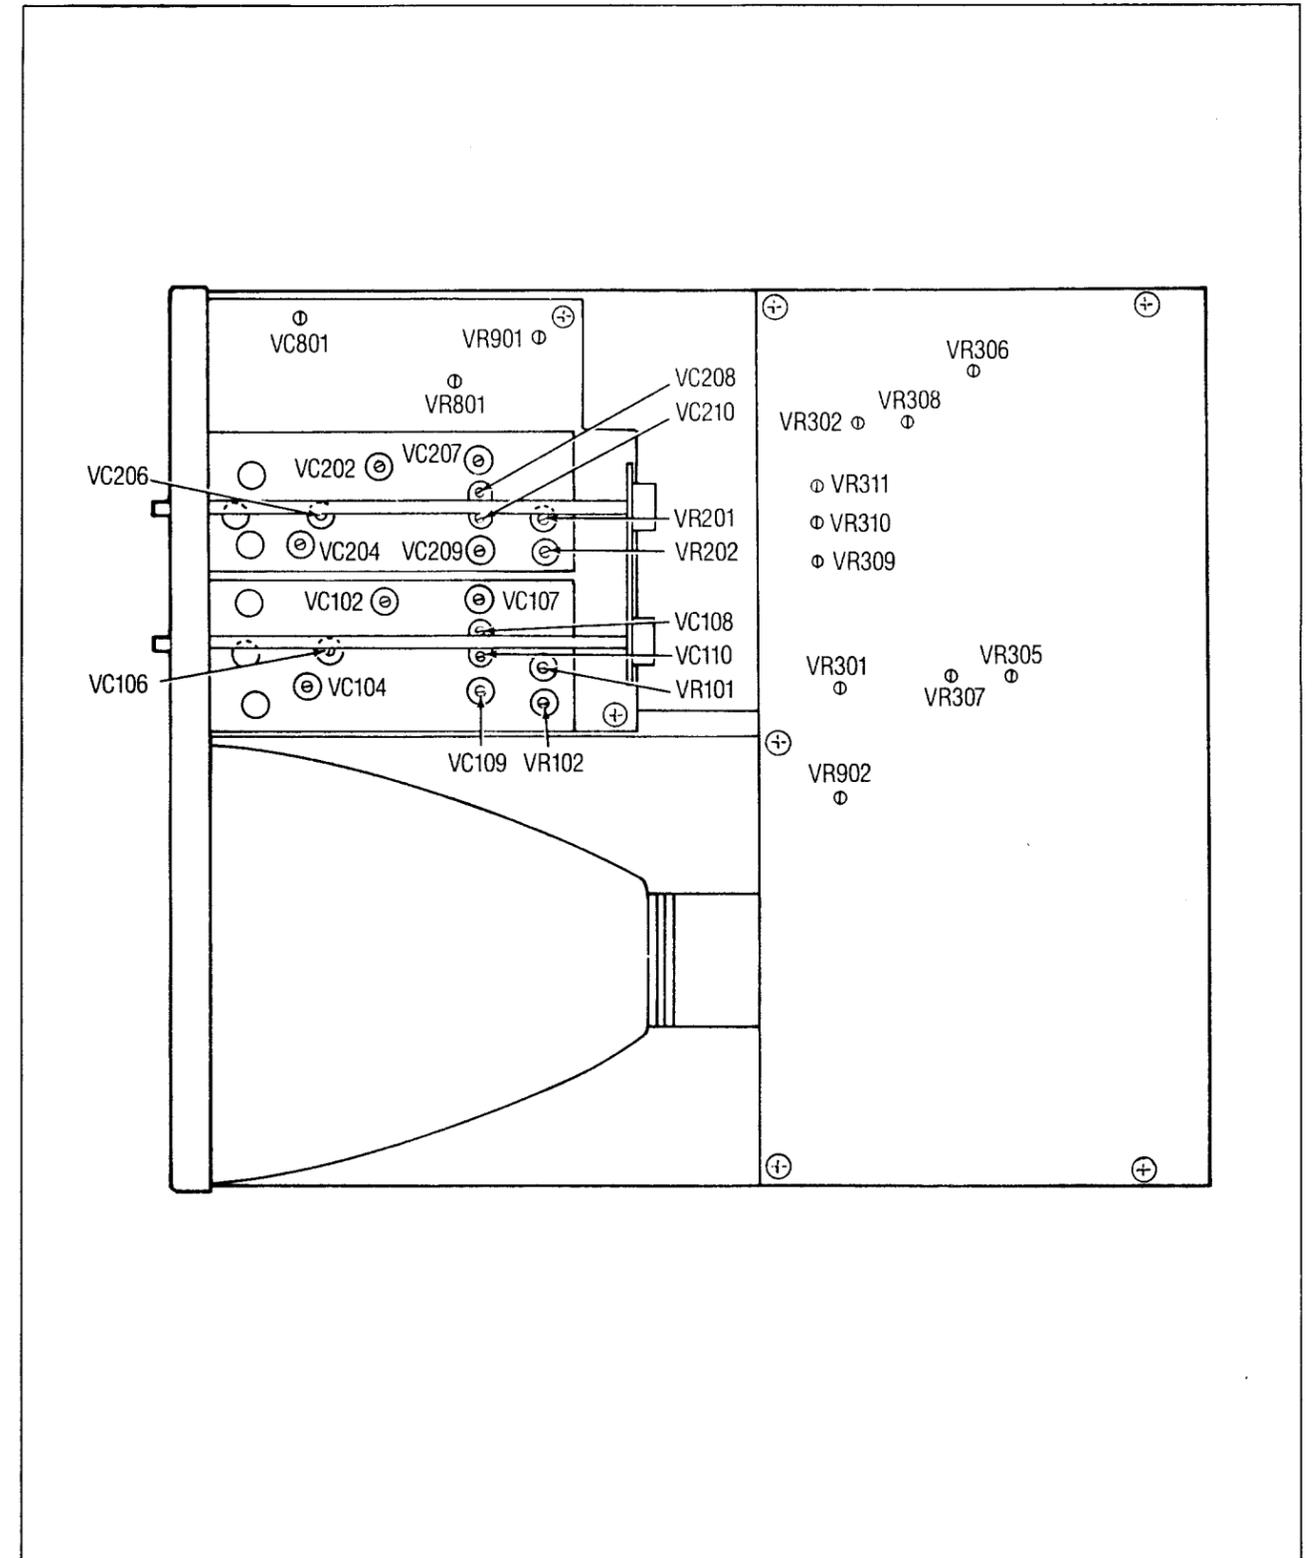

Fig. 2. Adjustment Locations (Bottom View).

- Rotating the channel 2 VAR control should cause no more than 1 minor division change in trace position. If necessary, adjust VR201 and VR202 until trace shift is 1 minor division or less when VAR control is rotated from CAL to fully clockwise.
- Return the channel 2 VAR control to the CAL position.

VERTICAL CENTERING ADJUSTMENT

- Set the channel 1 AC-GND-DC switch to the GND position, select the AUTO trigger mode, and set the oscilloscope for channel 1 single-trace display.
- Set the CH 1 POS control to its center.
- If necessary, adjust VR301 so that the trace is at the exact vertical center of the display.
- Switch to channel 2 single-trace display.
- Set the CH 2 POS control to its center.
- If necessary, adjust VR302 so that the trace is at the exact vertical center of the display.

VERTICAL VOLTAGE ADJUSTMENT

- Set up the oscilloscope for X-Y operation and set both AC-GND-DC switches to the GND position.
- Be sure that all four vertical mode switches are released and use the channel 1 POS and X POS controls to set the dot at the exact center of the CRT.
- If necessary, adjust VR305 to obtain 95 Vdc ±2 Vdc at the collectors of Q405 and Q406.
- Repeat steps 2 and 3 until no further adjustment is required.
- Press the CH 1/CH 2 switch and use the channel 2 POS and X POS controls to set the dot at the exact center of the CRT.
- If necessary, adjust VR306 to obtain 95 Vdc ±2 Vdc at the collectors of Q405 and Q406.
- Repeat steps 5 and 6 until no further adjustment is required.
- Disconnect the meter from the oscilloscope.

HORIZONTAL CENTERING ADJUSTMENT

- With the oscilloscope set up for X-Y operation and the PULL X10 control pushed in, set the X POS control to its center.
- If necessary, adjust VR606 until the dot is as close to the center (horizontally) of the CRT as possible.

HORIZONTAL VOLTAGE ADJUSTMENT

- With the oscilloscope still set up for X-Y operation and the PULL X10 control pushed in, set the position controls so that the dot is at the exact center of the CRT.
- If necessary, adjust VR804 to obtain 145 Vdc ±5 Vdc at the collectors of Q808 and Q809.
- Disconnect the meter from the oscilloscope.

SWEEP LENGTH ADJUSTMENT

- Set the oscilloscope for a single-trace display of channel 1 (with the channel 1 AC-GND-DC switch set to GND).
- Rotate VR605 fully counterclockwise.
- Use the X POS control to set the left edge of the trace on the left most vertical graduation and observe where the right edge of the trace falls.
- Again using the X POS control, move the right edge of the trace two divisions to the left.

- Rotate VR605 clockwise until the trace reaches the right edge of the CRT. This will allow about 12 divisions of horizontal deflection.

TIMEBASE ACCURACY ADJUSTMENT

- Set the oscilloscope calibrator for a 0.5 ms square wave (or markers) and connect it to the oscilloscope channel 1 input. Set the TIME/DIV control to 0.5 ms.
- Adjust the X POS control so that the first rising pulse edge (or marker) falls on the left most vertical graduation.
- If necessary, adjust VR801 so that each rising edge (or marker) falls on a major vertical graduation.
- Check all sweep speeds up to about 20 μs/div for accuracy and repeat adjustment if necessary.
- Set the oscilloscope calibrator for a 0.5 μs square wave (or markers) and set the TIME/DIV control to 0.5 μs.
- Again, adjust the X POS control so that the first rising pulse edge (or marker) falls on the left most vertical graduation.
- If necessary, adjust VC801 so that each rising pulse edge (or marker) falls on a major vertical graduation.
- Check all sweep speeds of 20 μs/div and above for accuracy and repeat adjustment if necessary.
- Recheck all sweep speed settings for accuracy and repeat entire procedure if necessary.

X10 MAGNIFICATION ADJUSTMENT

- Set the oscilloscope calibrator for a 5 μs square wave (or markers) and connect it to the oscilloscope channel 1 input. Set the oscilloscope TIME/DIV control to 50 μs.
- Pull out the PULL X10 control.
- Adjust the X POS control so that the first rising pulse edge (or marker) falls on the left most vertical graduation.
- If necessary, adjust VR804 until each rising edge (or marker) falls on a major vertical graduation.

TRIGGER ADJUSTMENT

- Apply a 1 kHz, 0.5 V p-p sinewave to the channel 1 input of the oscilloscope and set the CH 1 VOLTS/DIV control to 0.1 V.
- Adjust the CH 1 POS control so that the five divisions of waveform are centered vertically (the waveform should extend just beyond the 10 and 90% graticule markings).
- Adjust the TRIG LEVEL control so that the waveform crosses the center horizontal graduation at the leftmost graduation (as shown in Fig. 3).
- Press the SLOPE switch and observe the waveform.
- If necessary, adjust VR601 so the waveform again crosses the center horizontal graduation at the leftmost vertical graduation.
- Repeat steps three through five until no further adjustment is necessary.
- Reduce the 1 kHz sinewave level to 50 mV p-p and pull out the TRIG LEVEL/PUSH AUTO control.
- Adjust the TRIG LEVEL control to obtain as stable a display as possible.
- If necessary, adjust VR602 until the display can be stabilized (it may be necessary to readjust the TRIG LEVEL control to obtain a stable display).

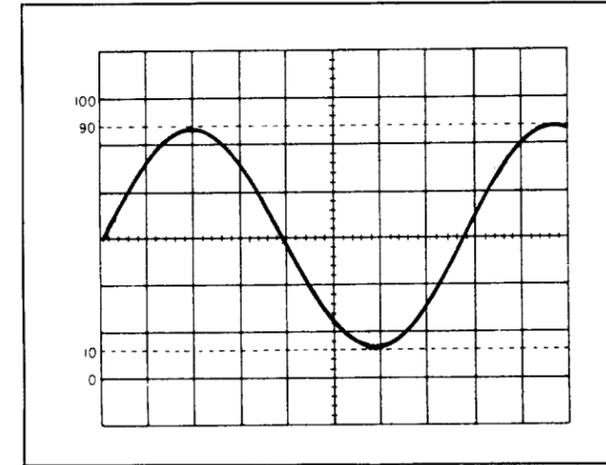

Fig. 3. Adjusting Trigger Point.

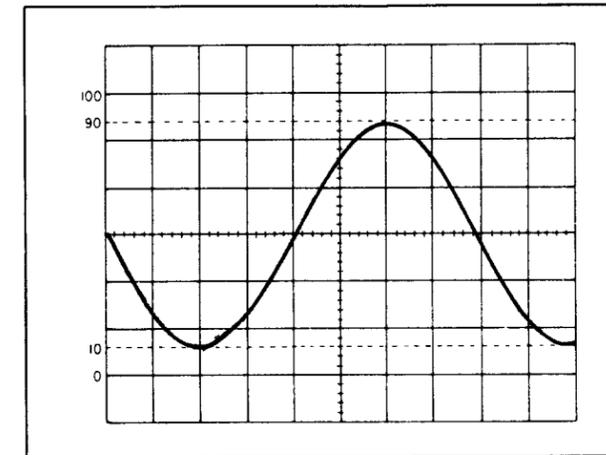

Fig. 4. Adjusting Trigger Point.

- Remove the input signal, set both AC-GND-DC switches to GND, and push in the TRIG LEVEL/PUSH AUTO control.
- With the oscilloscope set for channel 1 single-trace operation, use the CH 1 POS control to set the waveform at the vertical center of the display.
- Connect the multimeter to the collector of Q610 and if necessary, adjust VR309 for a reading of 0 Vdc ±10 mVdc on the multimeter.
- Set the oscilloscope for channel 2 single-trace operation.
- With the multimeter still connected to the collector of Q610, adjust VR310 for a reading of 0 Vdc ±10 mVdc on the multimeter.
- Disconnect the multimeter from the oscilloscope.

ATTENUATOR COMPENSATION ADJUSTMENTS

- Using the input circuit shown in Fig. 5, connect an oscilloscope calibrator to the channel 1 input. Set the calibrator for a 1 kHz square wave at 50 mV p-p and set the oscilloscope CH 1 VOLTS/DIV control to 5 mV. Adjust the oscilloscope controls for a stable display of about three cycles of the channel 1 signal.
- Adjust Cin (in the input circuit shown in Fig. 5) for optimum wave shape as shown in Fig. 6.

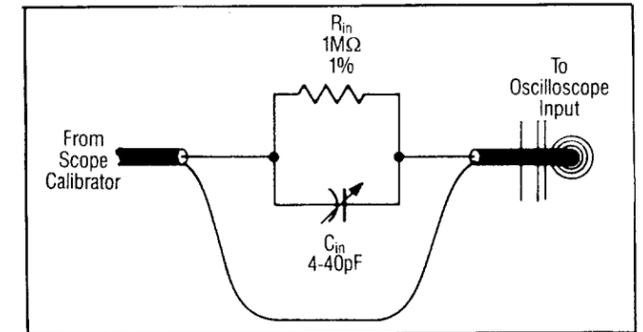

Fig. 5. Network for Input Attenuator Adjustment.

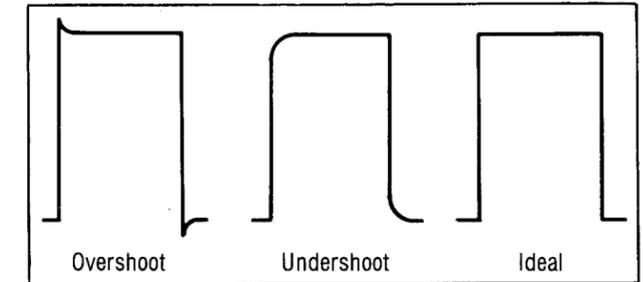

Fig. 6. Adjusting 1 kHz Square Wave Characteristics.

- Use the following table as a guide for setting the attenuator compensation.

CALIBRATOR INPUT LEVEL	OSCILLOSCOPE RANGE	TRIMMER
100 mV	10 mV/Div	VC108
200 mV	20 mV/Div	VC110
500 mV	50 mV/Div	VC102
1 V	0.1 V/Div	VC107
2 V	0.2 V/Div	VC109
5 V	0.5 V/Div	VC104
50 V	5 V/Div	VC106

- Again using the input circuit shown in Fig. 5, connect an oscilloscope calibrator to the channel 2 input. Set the calibrator for a 1 kHz square wave at 50 mV and set the oscilloscope CH 2 VOLTS/DIV control to 5 mV. Adjust the oscilloscope controls for a stable display of about three cycles of the channel 2 signal.
- Adjust Cin (in the input circuit shown in Fig. 5) for optimum wave shape as shown in Fig. 6.
- Use the following table as a guide for setting the attenuator compensation.

CALIBRATOR INPUT LEVEL	OSCILLOSCOPE RANGE	TRIMMER
100 mV	10 mV/Div	VC208
200 mV	20 mV/Div	VC210
500 mV	50 mV/Div	VC202
1 V	0.1 V/Div	VC207
2 V	0.2 V/Div	VC209
5 V	0.5 V/Div	VC204
50 V	5 V/Div	VC206

ATTENUATOR GAIN ADJUSTMENT

- Using the oscilloscope calibrator, connect a 1 kHz, 20 V p-p square wave to the channel 1 input and set the oscilloscope **CH 1 VOLTS/DIV** control to 5 V. Adjust the oscilloscope for a stable display of about three cycles of the channel 1 signal.
- If necessary, adjust VR307 for exactly four divisions of amplitude.
- Connect the calibrator (still set at 20 V p-p) to the channel 2 input and set the oscilloscope **CH 2 VOLTS/DIV** control to 5 V. Adjust the oscilloscope for a stable display of about three cycles of the channel 2 signal.
- If necessary, adjust VR308 for exactly four divisions of amplitude.

X GAIN ADJUSTMENT

- Set up the oscilloscope for X-Y operation and apply a 1 kHz, 20 mV signal (from the oscilloscope calibrator) to the oscilloscope's channel 2 (X) input. Set the **CH 2 VOLTS/DIV** control to 5 mV.
- If necessary, adjust VR311 so that the signal provides exactly 4 divisions of horizontal deflection.

VERTICAL FINAL AMPLIFIER ADJUSTMENT

- Apply a 1 MHz, 20 mV p-p square wave to the oscilloscope's channel 1 input and set the oscilloscope **CH 1 VOLTS/DIV** control to 5 mV. Adjust the oscilloscope for a stable display of about three cycles of the channel 1 signal and center the waveform so that it goes two divisions above and two divisions below the center horizontal graduation.

- Adjust VR401 and VC401 for optimum flatness of the squarewave (minimum ringing and overshoot).

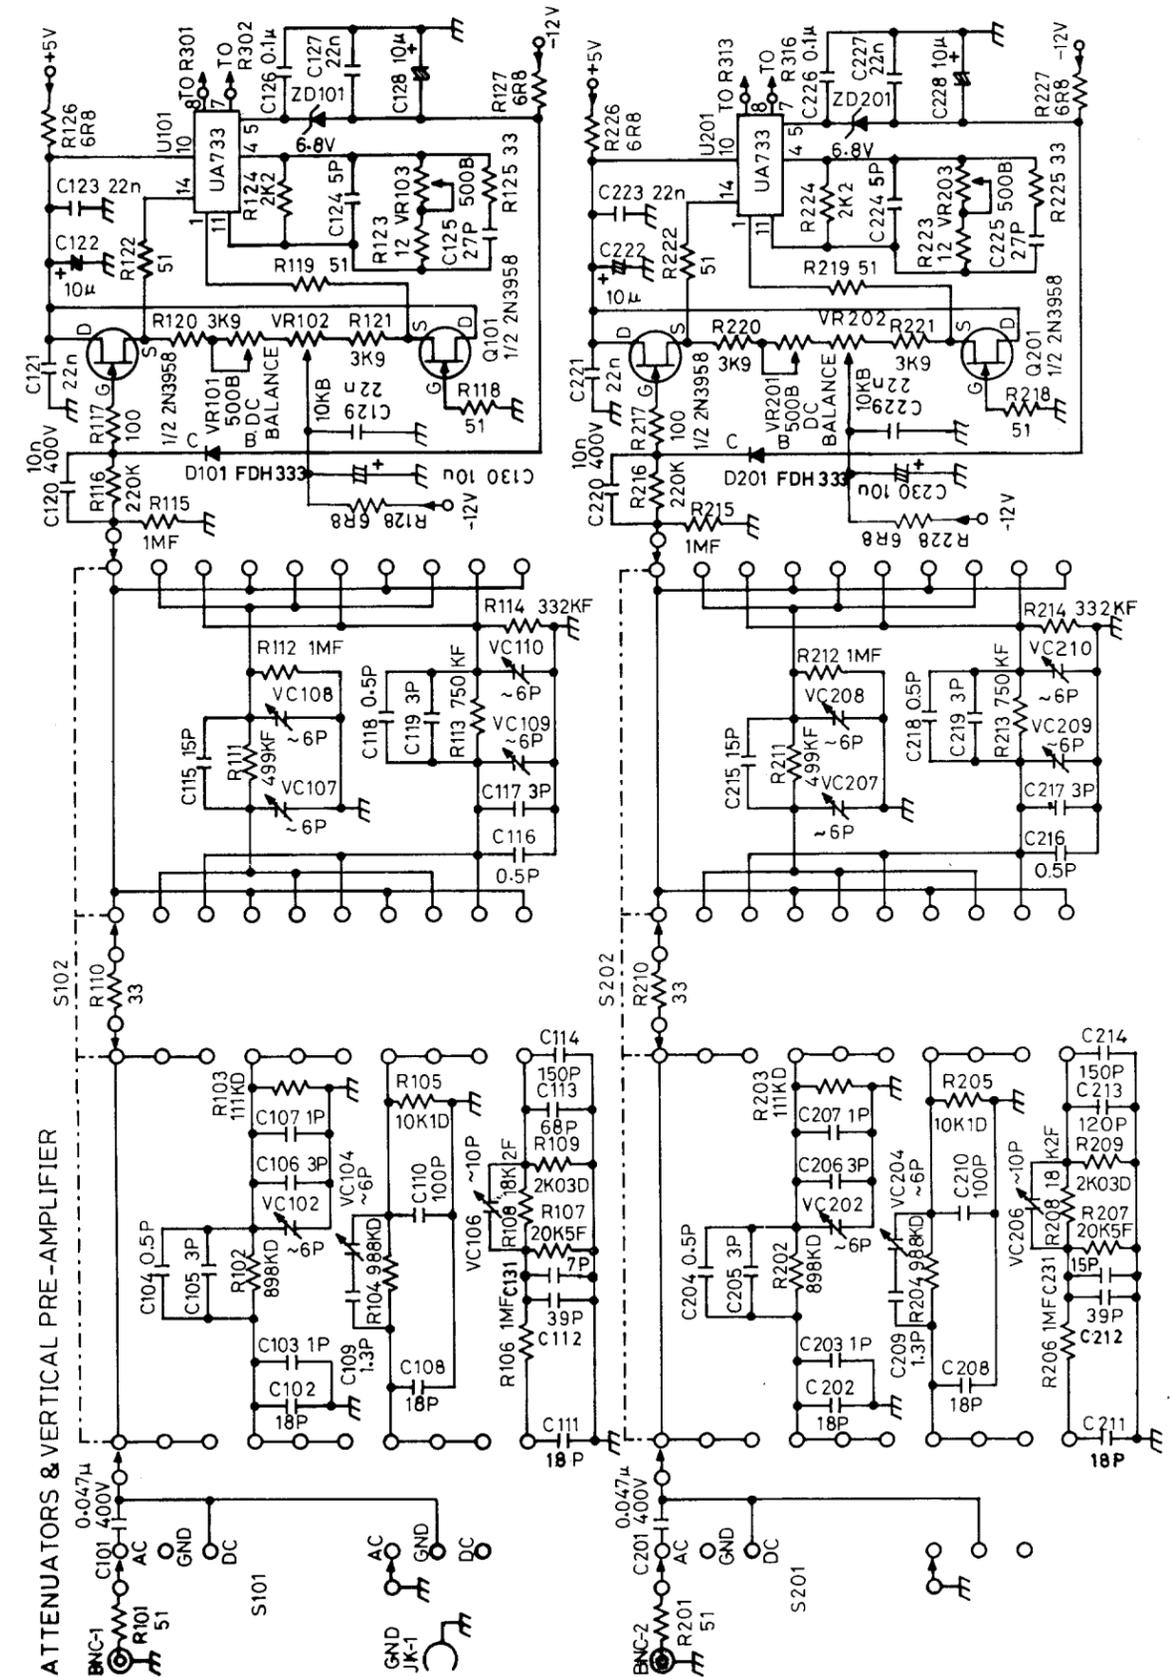

CH 1 OUTPUT DC OFFSET ADJUSTMENT

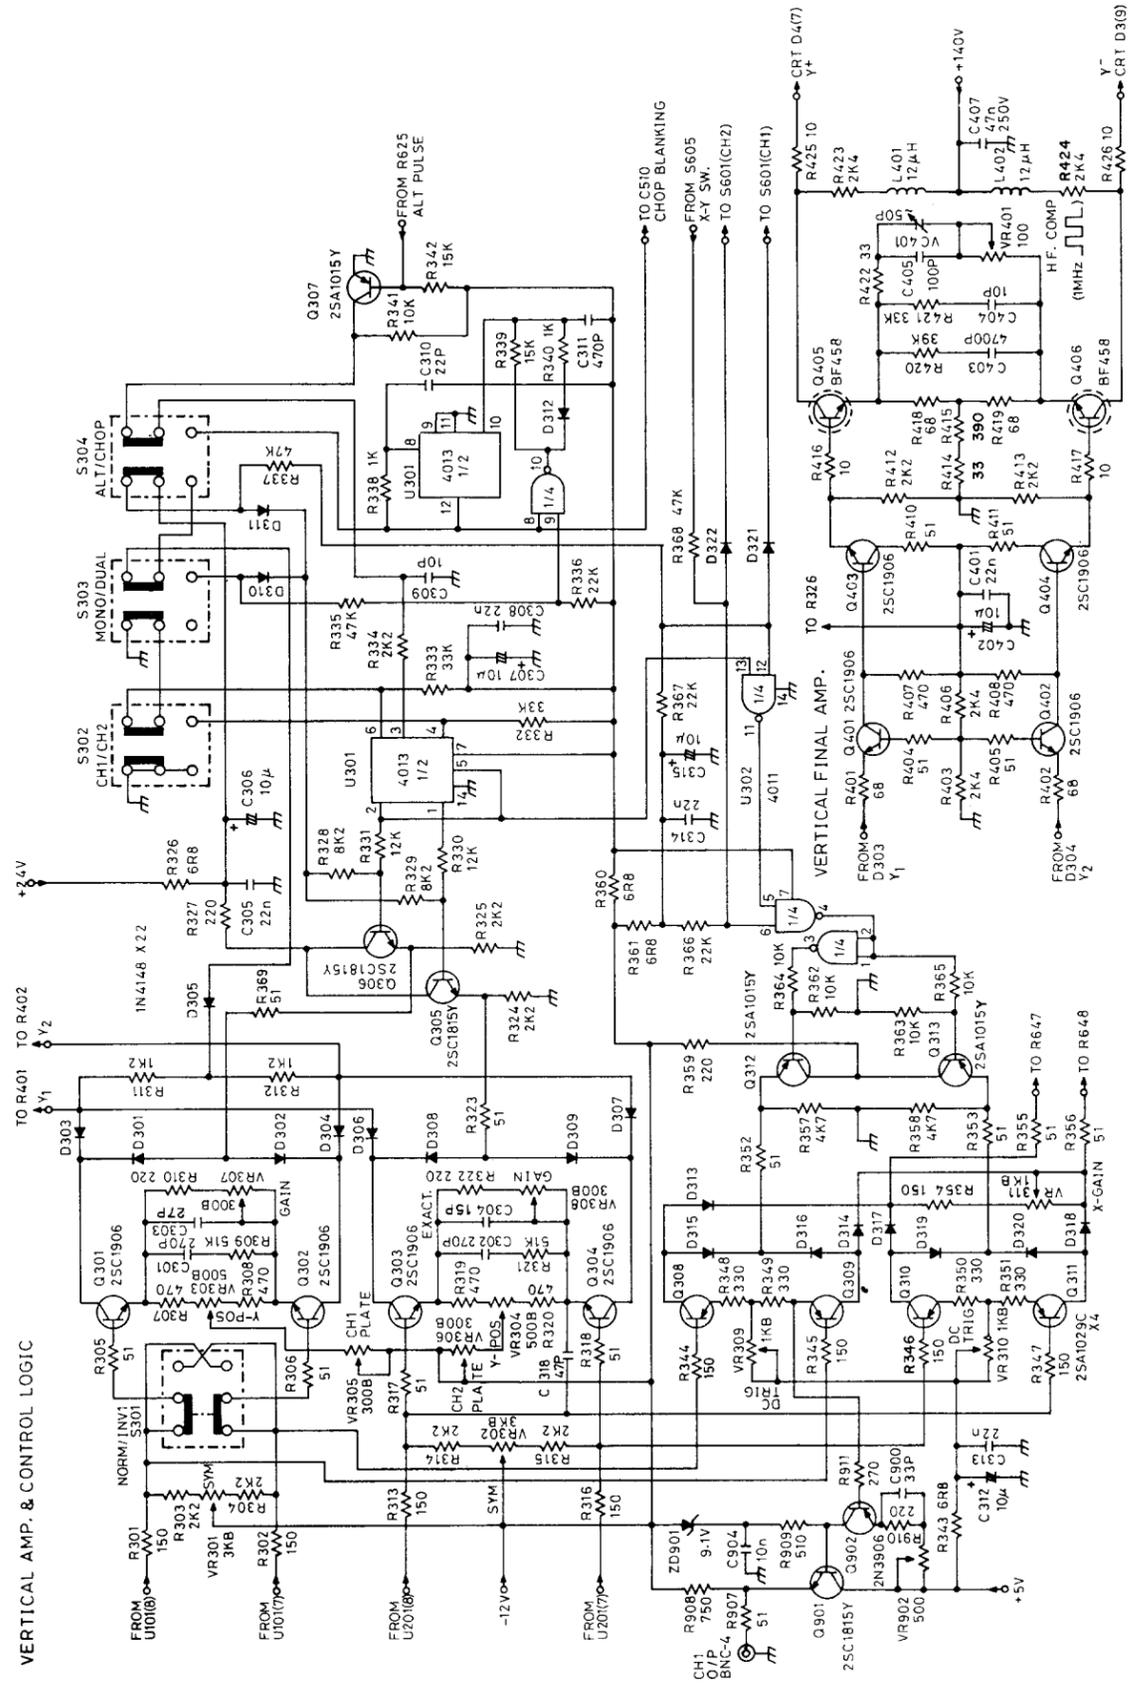

- Set the oscilloscope for single-trace channel 1 display with the channel 1 **AC-GND-DC** switch set to **GND**.
- Use the **CH 1 POS** control to set the waveform at the exact vertical center of the display.
- Connect the multimeter to the rear panel **CH 1 OUTPUT** jack.
- Adjust VR902 for a reading as close to 0 Vdc (on the multimeter) as possible.

CAL 0.2 V P-P OUTPUT ADJUSTMENT

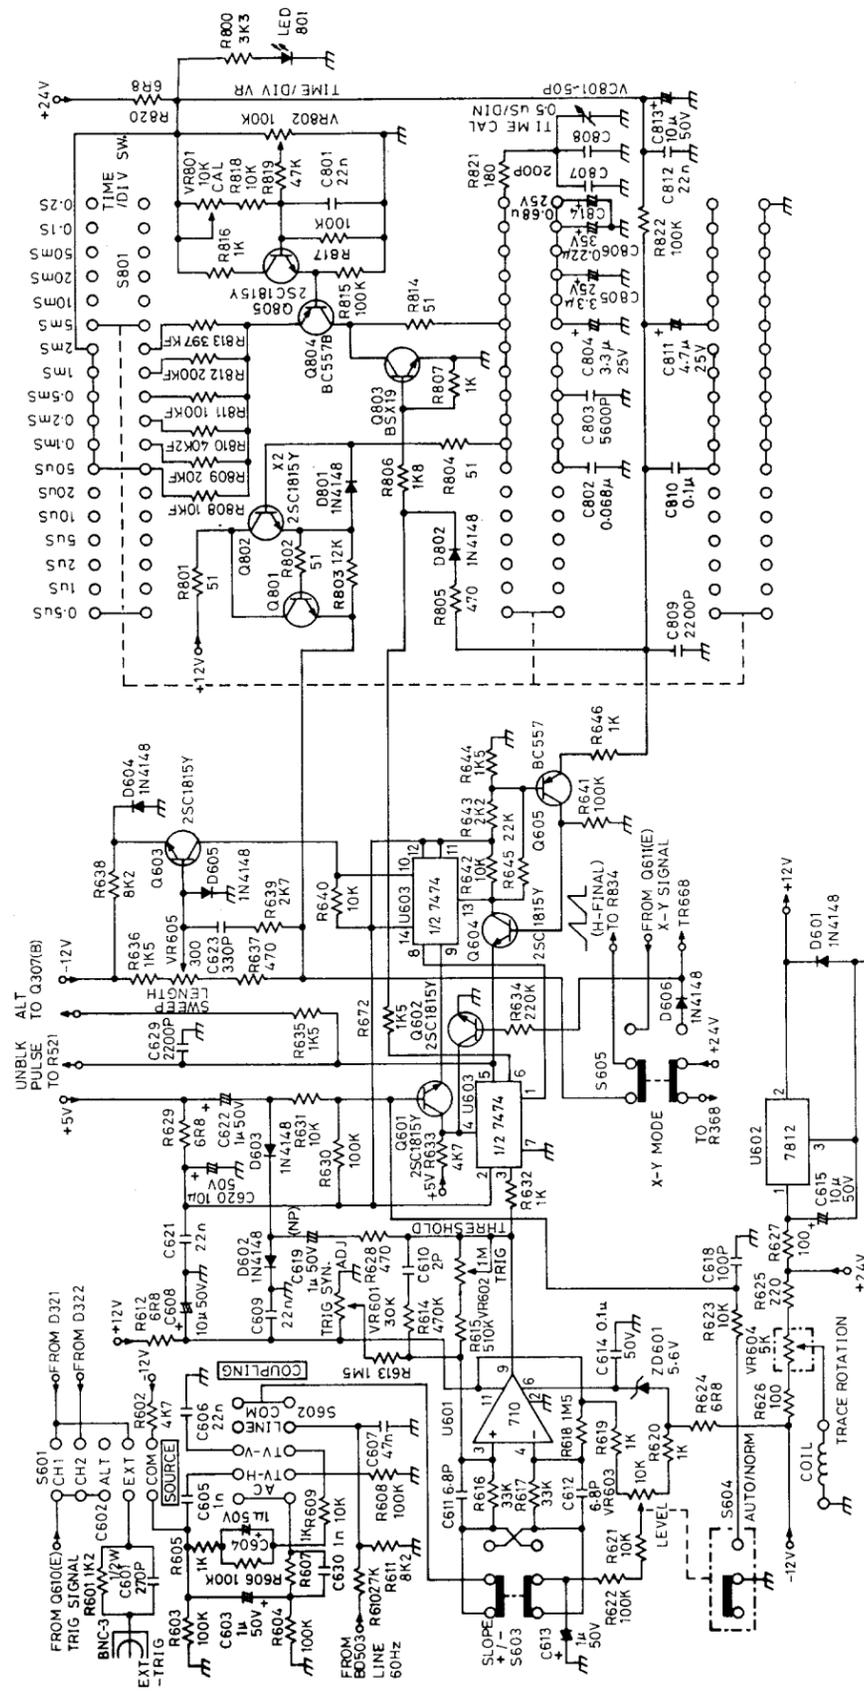

- Connect the oscilloscope calibrator to the channel 1 input of the oscilloscope and set the calibrator for a 0.2 V p-p output. Adjust the oscilloscope controls to obtain a stable display of about three cycles of the channel 1 signal.
- Use the oscilloscope's channel 1 **VAR** control to adjust the waveform so that it occupies **exactly** six vertical divisions of display.
- Disconnect the calibrator from the oscilloscope and connect the **CAL 0.2 V p-p** terminal to the channel 1 input. Be sure not to disturb the channel 1 **VAR** control setting.
- If necessary, adjust VR901 so that the **CAL 0.2 V p-p** signal occupies **exactly** six vertical divisions of display.
