

# MODEL DC-4

## POWER SUPPLY

### GENERAL DESCRIPTION.

The R. L. Drake Model DC-4 Power Supply is a self-contained power converter which transforms 12 Volts DC to the voltage necessary to operate the Drake 4-Line Transceivers and Transmitters. A receptacle supplying 115 VAC permits operation of the R-4C/T-4XC or T-4C combination.

### SPECIFICATIONS.

Input:	12 Volts DC.
Output:	650 Volts DC at 300 mA average (500 mA peak). 250 Volts DC at 175 mA. -45 to -65 Volts DC adjustable bias into 33 K Ohms. 115 Volts AC at 600 mA for receiver operation. *(115 Volts AC at 1.3 Amperes if used alone.)
Frequency:	Approximately 330 Hertz square wave.
Size:	8½ inches long x 4¼ inches wide x 3½ inches high.
Weight:	7 pounds.

\*An On-Off switch to short Pins 1 and 2 of the S-312-CCE female connector should be used to provide 115 Volts AC output for applications other

than an R-4C Receiver. A 'Tube Saver' such as GC Electronics No. 25-898 may be required for loads other than an R-4C. This is due to the extremely low cold resistance of some loads such as incandescent lamps, some TV sets, etc.

### INSTALLATION.

The DC-4 is supplied with a negative ground system for mobile use.

#### CAUTION

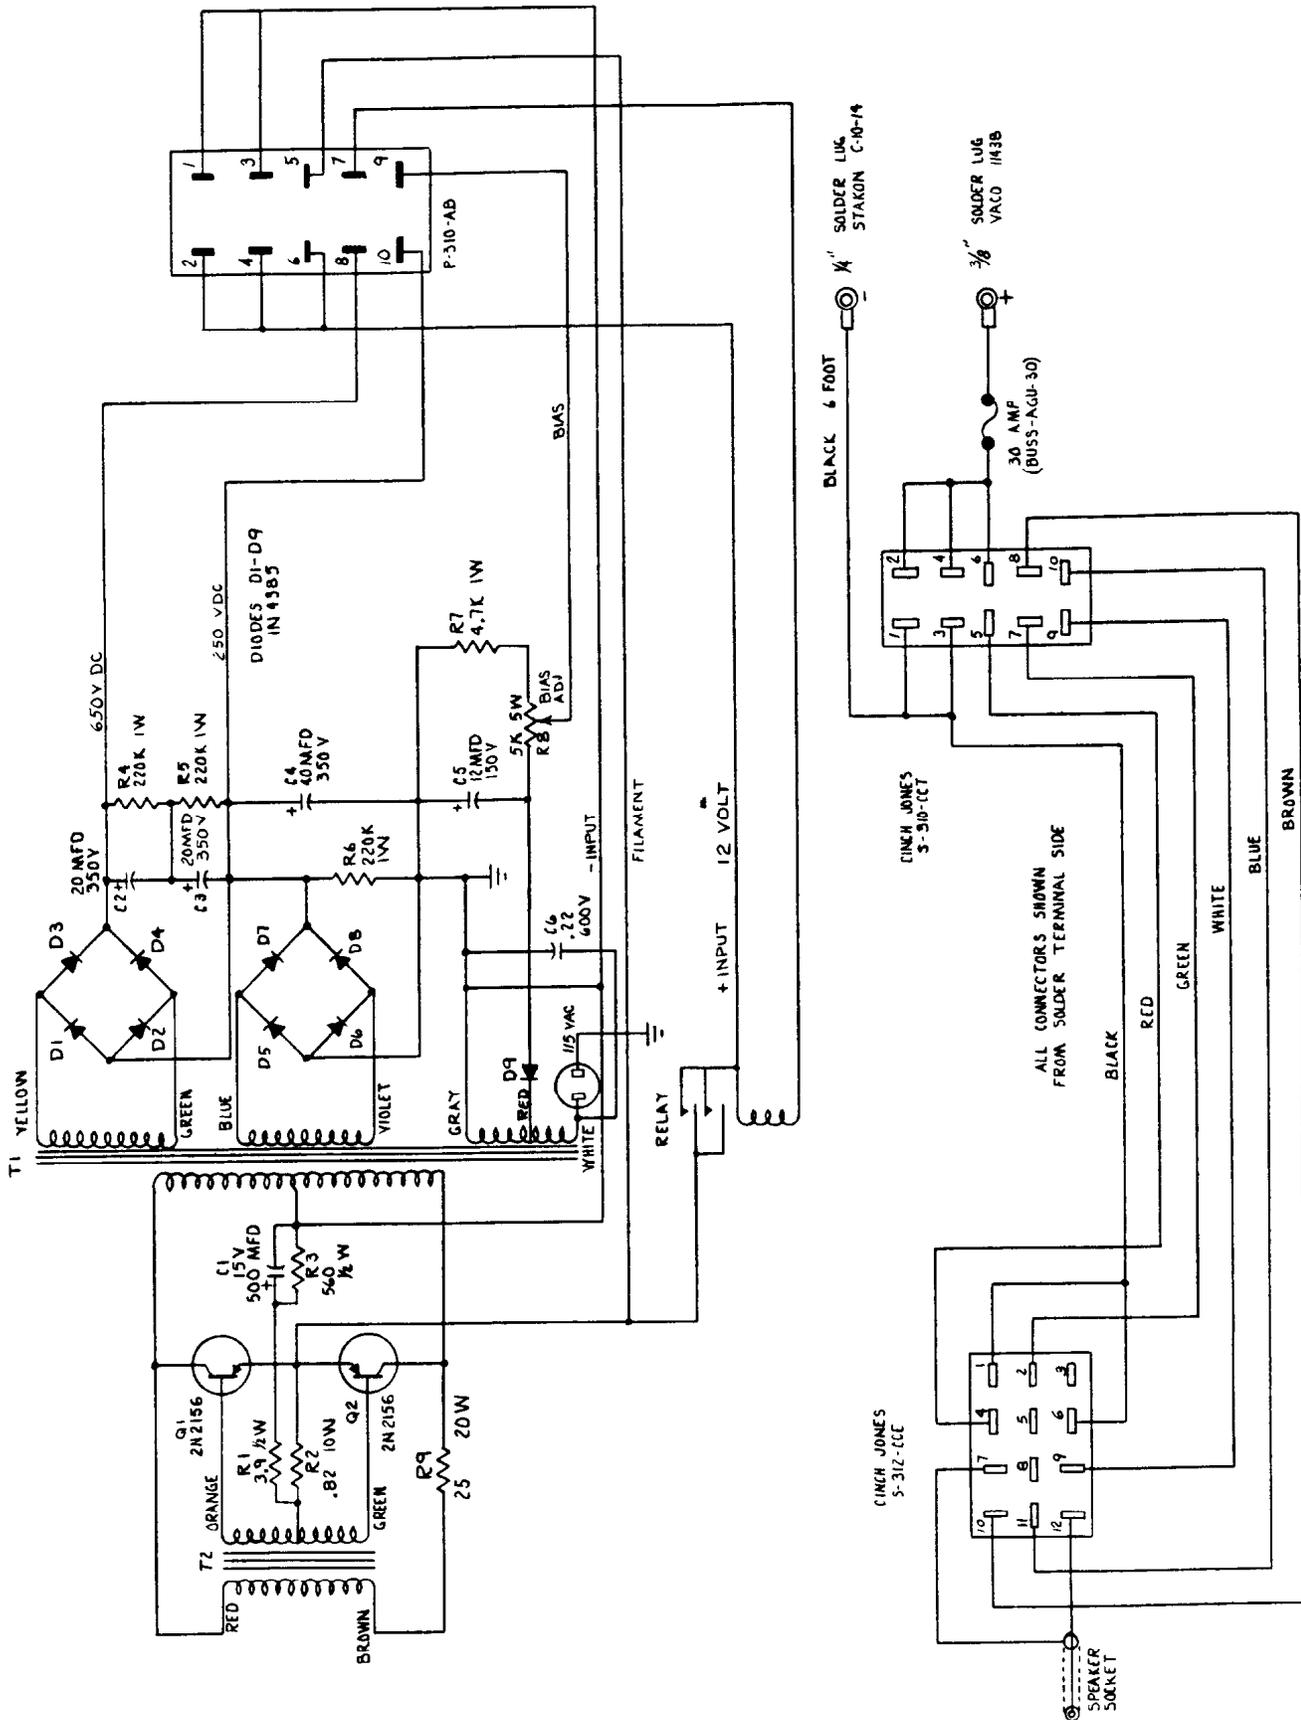

**DO NOT USE WITH POSITIVE  
GROUND SYSTEMS OR SERI-  
OUS DAMAGE MAY RESULT.**

The DC-4 should be mounted on the passenger side of the fire wall. It should not be placed in the trunk or in the engine compartment unless it is protected from water and engine heat.

Attach the short black wire of the cable assembly to the nearest convenient ground and run the red/white wire through the fire wall to the ungrounded terminal of the battery, or to the 'hot' terminal of the starter solenoid. Mount the fuse holder in a convenient location as near the battery as possible. Cut the black and red/white wires as short as possible to avoid unnecessary voltage drop.

Connect the DC-4 Power Supply to the transmitter using the cable assembly supplied. Coil up any excess cable and tape it in a convenient location.
