the hallicrafters *co.*

CHICAGO U.S.A.

OPERATING AND ALIGNMENT INSTRUCTIONS

SKYRIDER MARINE MODEL S22R

INSTALLATION: - It is recommended that, upon receipt, the carton and then the receiver be carefully examined for any damage which might have occurred in transit. File claim with the Carrier immediately should any sign of damage be apparent.

NOTE: The SKYRIDER MARINE Model S22R is an AC-DC receiver which operates on 110/125 volts only. Should operation be desired from a lower voltage DC source, an external converter delivering 110/125 volts should be used. A 220 volt DC Model S22R is available on order and uses a special line cord with dropping resistor.

Cabinet Dimensions: Length $18\frac{1}{2}$ " Depth $9\frac{1}{4}$ " Height $8\frac{1}{2}$ ". The receiver can be placed in any location convenient to its power source and antenna. Inasmuch as the Model S22R chassis is at the same ground potential as the cabinet the possibility of a short between chassis and cabinet is removed.

ANTENNA: - On the rear chassis apron will be found the Antenna Strip. A conventional Marconi, inverted "L", antenna should be connected to the A_1 terminal and the jumper between A_2 and G left connected. In order to get the most satisfactory pickup throughout the low frequency tuning range of the receiver, it is advisable to use the longest piece of wire for an antenna that it is possible to install. This same antenna will also perform satisfactorily on the higher frequencies. Should a commercially available "all wave" doublet antenna be used, the two wire transmission line from the flat top or matching transformer should be connected to terminals A_1 and A_2 with the jumper removed from A_2 and G. Should you wish to have a separate antenna for some one short wave frequency or band, a half wave antenna cut for that frequency will be an excellent performer. The following formula will give the length of the $1/2$ wavelength antenna depending on the desired frequency.

Length in feet $\frac{468}{\text{frequency in megacycles}}$ or

for example, a half wave 40 meter antenna would be $\frac{468}{7} = 66.8$ feet long. A good

ground, if it aids reception, should be connected at the G terminal.

OPERATION: - After connecting an aerial to the receiver, plug the power cord into the power socket. Now turn the control marked "Tone" to the right. Power is now connected to the receiver as will be indicated by the dial light behind the translucent dials. Allow a few moments for the tubes in the receiver to reach operating temperature.

Place the band switch in position #2 for standard broadcast coverage. The frequency range of the receiver by bands is as follows:

- Band 1 - 110 Kc to 410 Kc
(2730 to 733 meters)
- Band 2 - 400 Kc to 1500 Kc
(750 to 200 meters)
- Band 3 - 1.7 Mc to 5.9 Mc
(177 to 51 meters)
- Band 4 - 5.3 Mc to 18 Mc
(56 to 16.7 meters)

The sensitivity of the receiver is adjusted by the "RF Gain" control.

The "AF Gain" control adjusts the volume of both the loud speaker and headphone circuits. **NOTE:** When receiving telephone signals, the AVC or automatic volume control switch should preferably be ON. The "RF Gain" is then rotated clockwise as far as it will go, or the position of maximum sensitivity. The signal is then adjusted for a level of volume to suit your particular requirements with the A. F. Gain control. With the AVC switch OFF, the sensitivity of the receiver should be manually controlled by suitable adjustment of the RF Gain control or the receiver will block or overload. After you have familiarized yourself with the operation of the receiver you will determine the proper settings of these controls for the most favorable signal to noise ratio.

The BFO switch places the beat frequency oscillator in operation when snapped to the ON position. Adjustment of the knob

marked "Pitch Control" will enable you to change the pitch of the beat note to one most pleasing to you. The "Send Receive" switch, in the SEND position, removes plate voltage from the tubes in the receiver which makes it inoperative during a transmission or stand-by period.

Inasmuch as no direct current flows in the headphone circuit, crystal type headphones can be used. When headphones are plugged into the headphone jack, the speaker is

automatically disconnected.

NOTE: In keeping with the Underwriters recommendations the fuse block is mounted on the under side of the chassis. 250 volt 2 ampere replacement fuses can be installed only after the bottom plate has been removed from the receiver.

The Model S22R SKYRIDER Marine Receiver draws 50 watts at 117 volts 60 cycles A.C.

GUARANTEE

This receiver is guaranteed to be free from any defect in workmanship and material that may develop within a period of ninety (90) days from date of purchase, under the terms of the standard guarantee, as designated by the Radio Manufacturers Association. Any part or parts that prove defective within this period will be replaced without charge when subjected to examination at our factory, providing such defect, in our opinion, is due to faulty material or workmanship, and not caused by tampering, abuse or normal wear. All such adjustments to be made FOB the factory.

Should this receiver require any adjustments, your dealer or distributor has complete technical service information, or the factory will be glad to assist you in

any problem direct.

Should it be necessary to return any part or parts to the factory, a "Return Material Permit" must be obtained in advance by first writing the Adjustment Department, who will issue due authorization under the terms of the guarantee.

The Hallicrafters Co., reserves the right to make changes in design or add improvements to instruments manufactured by them, without incurring any obligation to install the same in any instrument previously purchased.

All Hallicrafters receivers are built under patents of Radio Corporation of America and Hazeltine Corporation.

ALIGNMENT PROCEDURE

ALIGNMENT INSTRUCTIONS:

Equipment needed for aligning:

- 1 - An all wave signal generator which will provide an accurately calibrated signal at the test frequencies indicated.
- 2 - Output indicating meter connected to a headphone plug, and inserted in the headphone jack.
- 3 - Non-metallic screw driver.
- 4 - Dummy antenna of .0002 mfd. condenser and 400 ohm resistor.

SETTING OF CONTROLS PRIOR TO ALIGNMENT - IF AND RF.

- 1 - Tone control at maximum high frequency position.
- 2 - AVC switch OFF.
- 3 - BFO switch OFF.
- 4 - RF Gain at maximum.
- 5 - AF Gain at maximum.

1600 Kc IF ALIGNMENT.

Tune receiver to 5,000 Kc with the band switch in #3 position.

Connect hot side of signal generator to 6K8 grid cap through .01 mfd. condenser - ground of generator to the chassis. Signal generator output - 1,600 Kc.

Adjust screws S1 to S6 inclusive on IF transformers T 1-2-3 for maximum gain.

BFO ADJUSTMENT - With a 1600 Kc signal being fed into the IF amplifier, and the BFO switch ON, place the Pitch Control with the white dot UP. Now adjust the screw S7 on the top of T5 for zero beat. Further adjustment of the Pitch Control from the front of the panel will enable you to vary the frequency of the beat note to your satisfaction.

R.F. ALIGNMENT

Connect hot Lead of Signal Generator to A_1 through dummy Antenna shown in Table.
Leave Jumper connected between A_2 and G. Ground of Generator to Chassis.

BAND	REC. DIAL SETTING	SIG. GEN. FREQ.	DUMMY ANTENNA	HIGH FREQUENCY END		LOW FREQUENCY END

V ₄	Same as V ₁	2nd I-F amplifier		
V ₅	Tube, duplex-diode, high-mu triode, type 6SQ7	Detector, A-F amplifier	RCA	90X6SQ7
V ₆	Tube, detector amplifier triode, type 6J5	Beat frequency oscillator	RCA	90X6J5
V ₇	Tube, beam power amplifier, type 25L6	A-F power amplifier	RCA	90X25L6
V ₈	Tube, rectifier-doubler, type 25Z5	Rectifier	RCA	90X25Z5

INDEX TO PARTS MANUFACTURERS

SYMBOL	MANUFACTURER	SYMBOL	MANUFACTURER
A	Aerovox Corp. New Bedford, Mass.	MN	Meissner Mfg. Co. Mt. Carmel, Illinois
ASA	Any manufacturer meeting the applicable American Standard Association specification	MT	The Muter Co. Chicago, Illinois
CRL	Centralab Milwaukee, Wis.	OM	Oak Mfg. Co. Chicago, Illinois
CT	Chicago Telephone & Supply Co. Elkhart, Indiana	QN	Quam-Nichols Co. Chicago, Illinois
E	Essex Wire Co. Chicago, Illinois	RC	Radio Condenser Corp. Camden, N. J.
GE	General Electric Co. Schenectady, N. Y.	RCA	R. C. A. Mfg. Co. Harrison, N. J.
GT	General Transformer Corp. Chicago, Illinois	SP	Sprague Specialties Co. North Adams, Mass.
HH	Hart & Hegeman Elec. & Co. Hartford, Conn.	SWI	S. W. Inductor Chicago, Illinois
LF	Littlefuse Inc. Chicago, Illinois	U	Utah Radio Products Co. Chicago, Illinois
MA	P. R. Mallory & Co. Indianapolis, Indiana	UE	Underwood Elec. Chicago, Illinois

the Holcrafters co.
